

A telematics system as it should be.

Profit from a competitive advantage!

This will benefit your employees

Easy handling

GPS-CarControl works automatically. The modern telematics system acquires all relevant data and transmits it to the GPS-CarControl server. Access is gained via our web portal or the GPS-CarControl App.

Time saving

The electronic driver's logbook keeps track almost autonomously. Only a few manual additions are needed in order to generate a complete report for the tax office.

Reasons to choose GPS-CarControl

Dependable

We offer you everything from a single source – with competent support and dependable service.

Flexible

With our individually adaptable products, we create the optimal solution for your fleet.

Reliable

More than 2,000 companies already trust in GPS-CarControl.

The ideal pool car solution for your vehicle fleet

GPS-CarControl helps you manage your vehicle fleet, determine the occupancy of your pool cars and generate a complete driver's logbook.

Pool car management:
Gain a better overview with our booking system

Your advantages at a glance

Pool car management

Always know who is currently using which pool car. Check the occupancy of your vehicle fleet and reveal possible savings potential.

Extensive fleet management

Manage your fleet and deposit all relevant vehicle information and documents. Alarm functions ensure that you do not miss any important appointments.

Key management interface

Profit from the advantages of a fully integrated key management system – easy vehicle booking, authorised key issuance and many more.

Driver's logbook

The driver mode enables every driver to see and edit his own journeys, supported by a reminder function and an automatic period closure – whether on the computer or via smartphone.

The perfect complement to our pool car solution

Device data

GSM

- quad-band 900/1.800 MHz; 850/1.900 MHz
- GPRS multi-slot class 12 (up to 240 kbps)
- GPRS mobile station class B
- SMS (text/data)

GNSS

- tracking: 33/99 acquisition channels
- -165 dBm sensitivity
- hot start < 1 s
- cold start < 35s
- accuracy <3m

Interface

- 3 digital inputs (1 reserved for ignition), 1 analog input (10 V or 30 V)
- 2 digital outputs
- 1-Wire temperature sensor
- 1-Wire iButton
- power supply: +10 to +30 V DC
- internal GSM and GNSS antenna
- integrated backup battery
- 2 LED status lights
- USB port
- measurements: 65x56,6x18,9 mm

Features

- multi-satellite system (GPS, GLONASS, GALILEO, BEIDOU, SBAS, QZSS, DGPS, AGPS)
- small and easy to mount, removable without residue
- internal high gain GSM and GNSS antenna
- highly sensitive premium GPS receiver guarantees high reception quality even in unfavorable conditions
- precise route recording
- intelligent GPRS connection algorithm for data saving
- Deep Sleep mode (less than 6 mA power consumption)
- online firmware and configuration update
- time synchronization via NTP (Network Time Protocol), if no GNSS signal is available
- possible device scenarios: speeding detection, immobilizer, driver identification, GSM jamming detection
- CAN data acquisition via CANBus adapter possible
