

POWER PAGES TRAINING

from the experts at Engineered Code

Help avoid the steep learning curve associated with Power Pages with our online, self-paced course. Your one-year subscription includes course updates, as well as monthly office hours and priority community forums support!

\$1495 USD

Our course is built by Nicholas Hayduk, a Microsoft Business Applications MVP who has worked with Power Pages since the beginning, including starting his career over a decade ago at Adxstudio – the original builder of Power Pages acquired by Microsoft in 2015.

The course includes modules that cover installation, administration, content management, security, lists, forms, ALM and pro-code topics. The course consists primarily of pre-recorded videos, but also includes quizzes, and links to our other content, such as blogs, videos, and podcasts, for each of the topics. Our course assumes a basic knowledge of model-driven Power Apps and Dataverse, so if you are brand-new to the Power Platform, we recommend getting up to speed on those topics first.

Your annual subscription includes:

- Access to the online, self-paced course, including any updates.
- Monthly office hours, where any students can join a call with Nicholas to ask questions.
- Priority support on the community forums – send us an email with a link to your post, and we'll do our best to get you an answer.

Engineered Code's Power Pages training is the best way to get up to speed quickly on the newest member of the Microsoft's Power Platform at your own pace, and from the comfort of your home or office. The additional benefits of monthly office hours and priority community forums support will save you hours of frustration.
