# EXSight
Turning your data into actionable insights.

# JUMPSTART YOUR DATA ANALYTICS JOURNEY

## Overview

We work and operate from the principle that data is the drivetrain of everything good that is happening and can happen in an organization. From understanding the customer better, improving business processes, identifying new opportunities for revenue, to balancing risk and reward (these things most people call digital transformation), data is the fuel to the flame, and EXSight can help you harness this Promethean gift.

## What is ExSight?

EXsight (Exist Data Analytics Insights) is an End-to-End Data Solutions Package. It showcases best-of-breed data management technologies and a range of services to carry out the actions required to jumpstart your Data Analytics Journey.

## What Are you Getting

### 1. Data Platform Tools
The project will include the implementation of superb Open Source tools, providing you with a range of capabilities and opportunities to become a data-centric company without the worries of vendor lock-in.

### 2. Data Platform Implementation
From Data Integration to Basic Data Cleansing to Data Warehousing, our Data Architects can assist you in implementing technologies that give the capabilities required to execute the overall business goals of the data strategy.

### 3. Data Analyst Services
Our Data Analytics team will assist you in bringing value to your valuable business data. Our team will help you realize the full potential of your organization by doing data cleansing and analysis, data exploration, and the creation of visualizations, dashboards, and reports.

### 4. Training
We will help you harness the full potential of the technologies by ensuring that business users can adapt to the new developments through a series of enablement activities such as BI Tool and IT enablement.

### 5. Data Platform Support
Get an optional three-month to one-year output-based support. Allow your system to function at any time without interruption! Our experts will assist you in resolving technical issues. Identifying and correcting errors.

# Benefits

### Centralize and Curate Trusted Data

Get a 360-degree perspective of your company and evaluate the data stream from your customers to develop an effective and strategic plan for your organization. Let's begin your Data Analytics Journey by breaking down data silos, cleaning up dirty/messy data, and analyzing results for business insights.

### Self-Service Visualization Tools

The Business Intelligence component of ExSight provides users with little to no programming experience with the ability to construct dashboards and reports.

### Access to our Data Architects and Analysts

Throughout the project cycle, collaborate closely with our technical experts! Get technical assistance, create strategic technical plans, and identify business opportunities.

### Collaboration between users and departments

One of the primary methods of data visualization involves the use of programming languages such as Python and R to construct these dashboards and reports. While collaboration between users can be achieved through the use of version control software like Git, ExSight streamlines this process by facilitating sharing of datasets and reports between users and groups, with the option of limiting access to these shared materials, also known as permissioning.

# Use Cases

**A premier higher-education institution in Mindanao**
- Data Warehouse and Reporting system

**Leading and Fastest Bread Brand in the Philippines**
- Demand Forecasting and Sales Order Management System.

**A Philippine agency for all land transportation**
- Cloud Data Management and Data Warehousing

**Internal EXIST data analytics**
- Sales & Marketing Analytics and Reporting system
