Bonds Beyond your Building Boundaries

Are you constrained by the capacity of your hospital and staff? Who looks after your patients between your consultations? GlobalMedics.AI Virtual Hospital Platform enables you build deeper, long-term relationships with your patients from well before they present to your ED or OPD, to well after post-acute discharge. Extend the continuum of care journeys into people's homes, and their hearts, while delivering on:

 **Reduce Emergency Wait Times:** Community-based triage optimises hospital visits. Self-service history taking, symptoms & vital signs capture, reduces staff load & enables language translations.

 **Increase Staff Efficiency:** Automating routine tasks with Remote Monitoring of your in-patients reduces staff workload & enhances job satisfaction. Self-recording patient history reduces time per consult while enhancing clinical decisioning and health outcomes.

 **Reduce Length of Stay & Enhance Revenues per Bed:** A new service offering of "Remote Rehabilitation" enables early discharge, freeing up beds for more needy (higher billing) patients. Enhanced Care Plan adherence and proactive monitoring in-between consultations reduces avoidable readmissions.

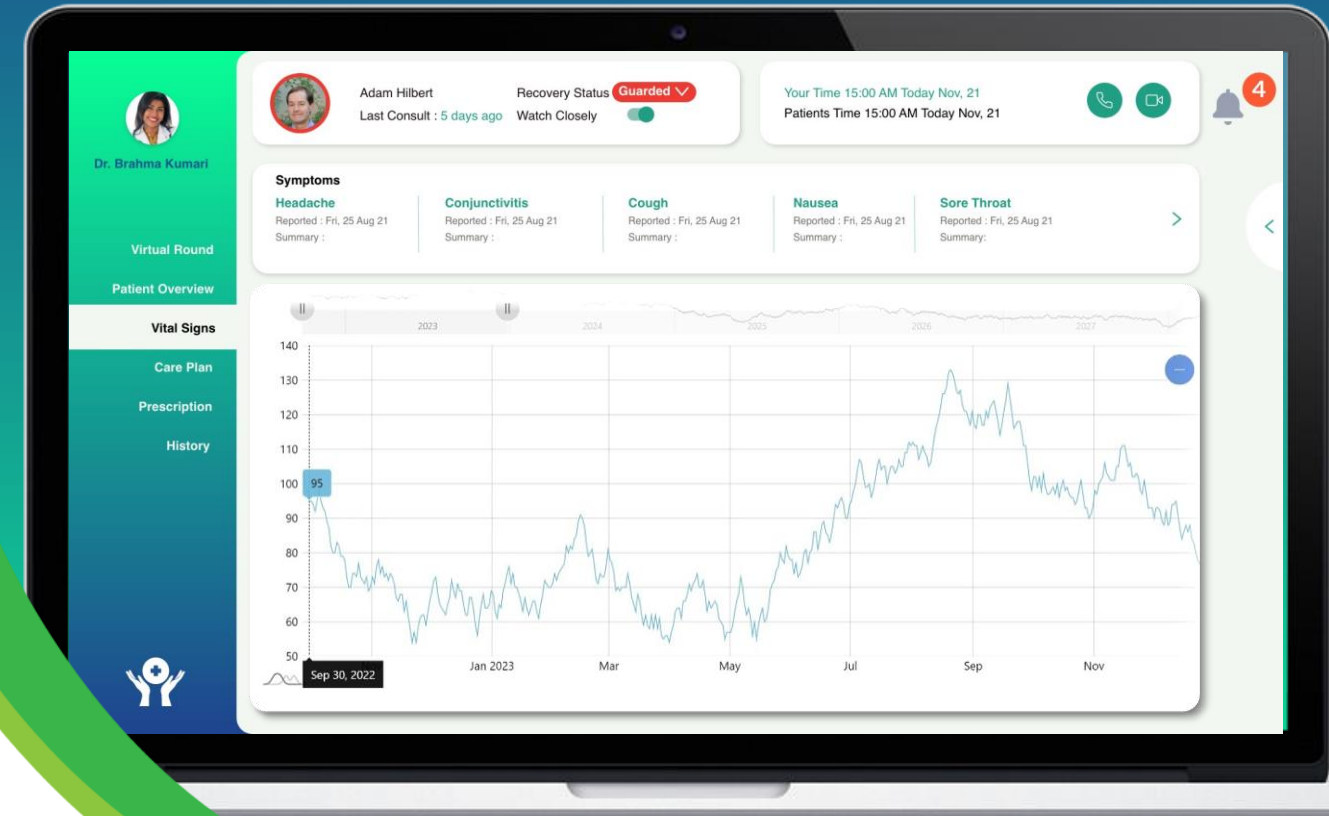

Patient-Centred "Care Rings" of Caring

The GlobalMedics.AI Care Ring App leverages two industry trends. The first is connecting people (patients/family/friends) into a collaborative social network, or 'Care Rings' of caring. The second is connected devices (mass-market smartwatches, sleep sensors, fall-detection radars, digital BP cuffs etc).

The platform also brings together an ecosystem of multi-disciplinary providers (doctors, health coaches, nutritionists, Yoga instructors etc.), who collaborate in real time to take each customer through a personalised care plan. The burden of care is distributed among multiple providers, with your patient right in the centre! Like never before.

Automating patient vital signs and symptom capture and enabling self-care by patient and family frees up your staff's time to provide more human-based care, while enhancing job content and reducing burnouts. Delivering significantly enhanced levels of care, at reduced efforts & costs.

Holistic Health with Hospital at-Home

Your patients would go through a structured 4C process of comprehensive care:

- **Care Ring:** Onboarding of patients, their families, and care givers into a trusted "Social Network", supporting each other's health.
- **Calibrating:** Initial health assessment by professionals (doctors, dieticians etc), assisted by AI-based tools. Personalised Care Plans.
- **Caring:** Hybrid (digital + physical) interventions – counselling, education, medicines, exercises, nutrition, lifestyle changes etc.
- **Continuing:** Proactive health monitoring based on Care Plans. AI-assisted self-monitoring & management by Care Ring members.

GlobalMedics.AI Virtual Hospital platform easily extends your organisation's care into people's homes. It is a data / AI layer that engages with your patients using mobile apps & chatbots. It exchanges data with your existing Electronic Health Records & Hospital Management systems via APIs and Robotic Process Automation. Reducing risk, cost, and time to get the new solution delivering business KPIs quickly.
