Bonds for Business & Bottomline

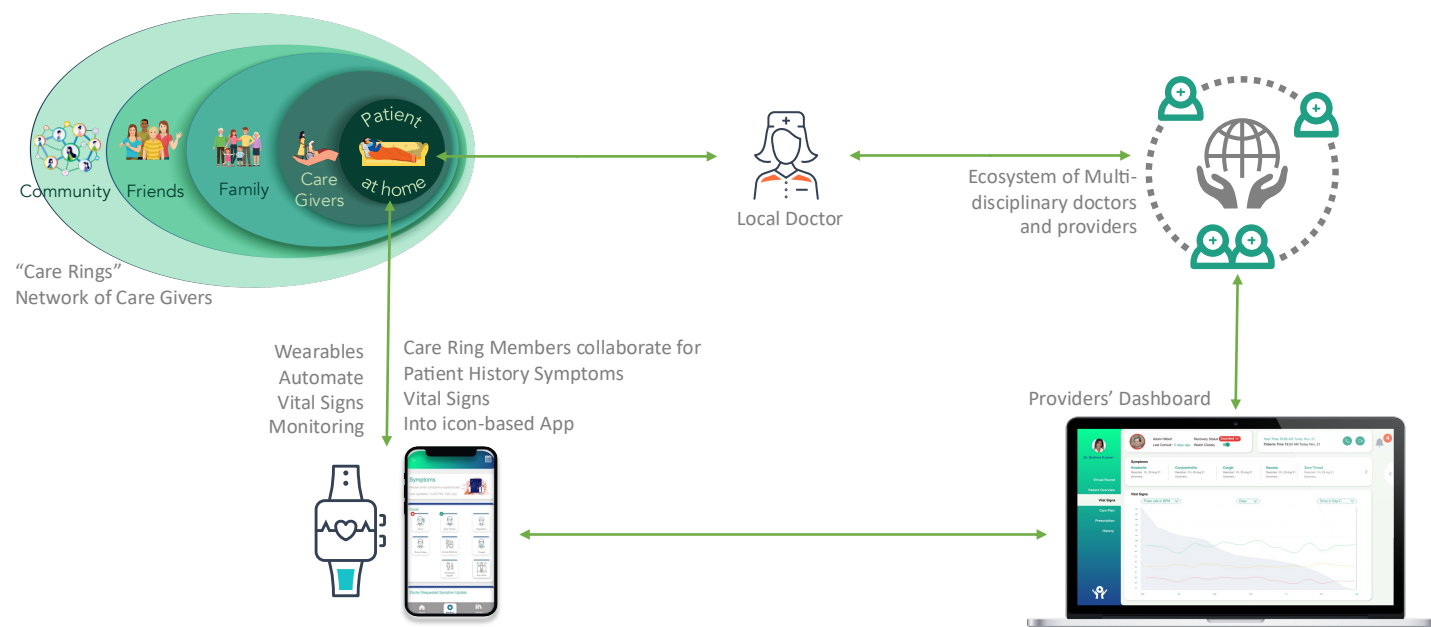

Would you like to enable your customers to improve their health outcomes and reduce claims? GlobalMedics.AI Care Ring app enhances your business outcomes while building deep customer relationships:

-  **Reduce Claims Ratio:** Proactive monitoring of vital health parameters and a range of health services enhances health outcomes, reducing hospitalisation & emergency claims.
-  **Enhance Loyalty:** The solution brings together families and carers into a cohesive network. A unique proposition leading to stickiness for individuals, families, and the wider community.
-  **Increase Revenues:** New premium care offerings for your at-risk members brings additional revenues. Additional signups within an existing social network of happy customers.

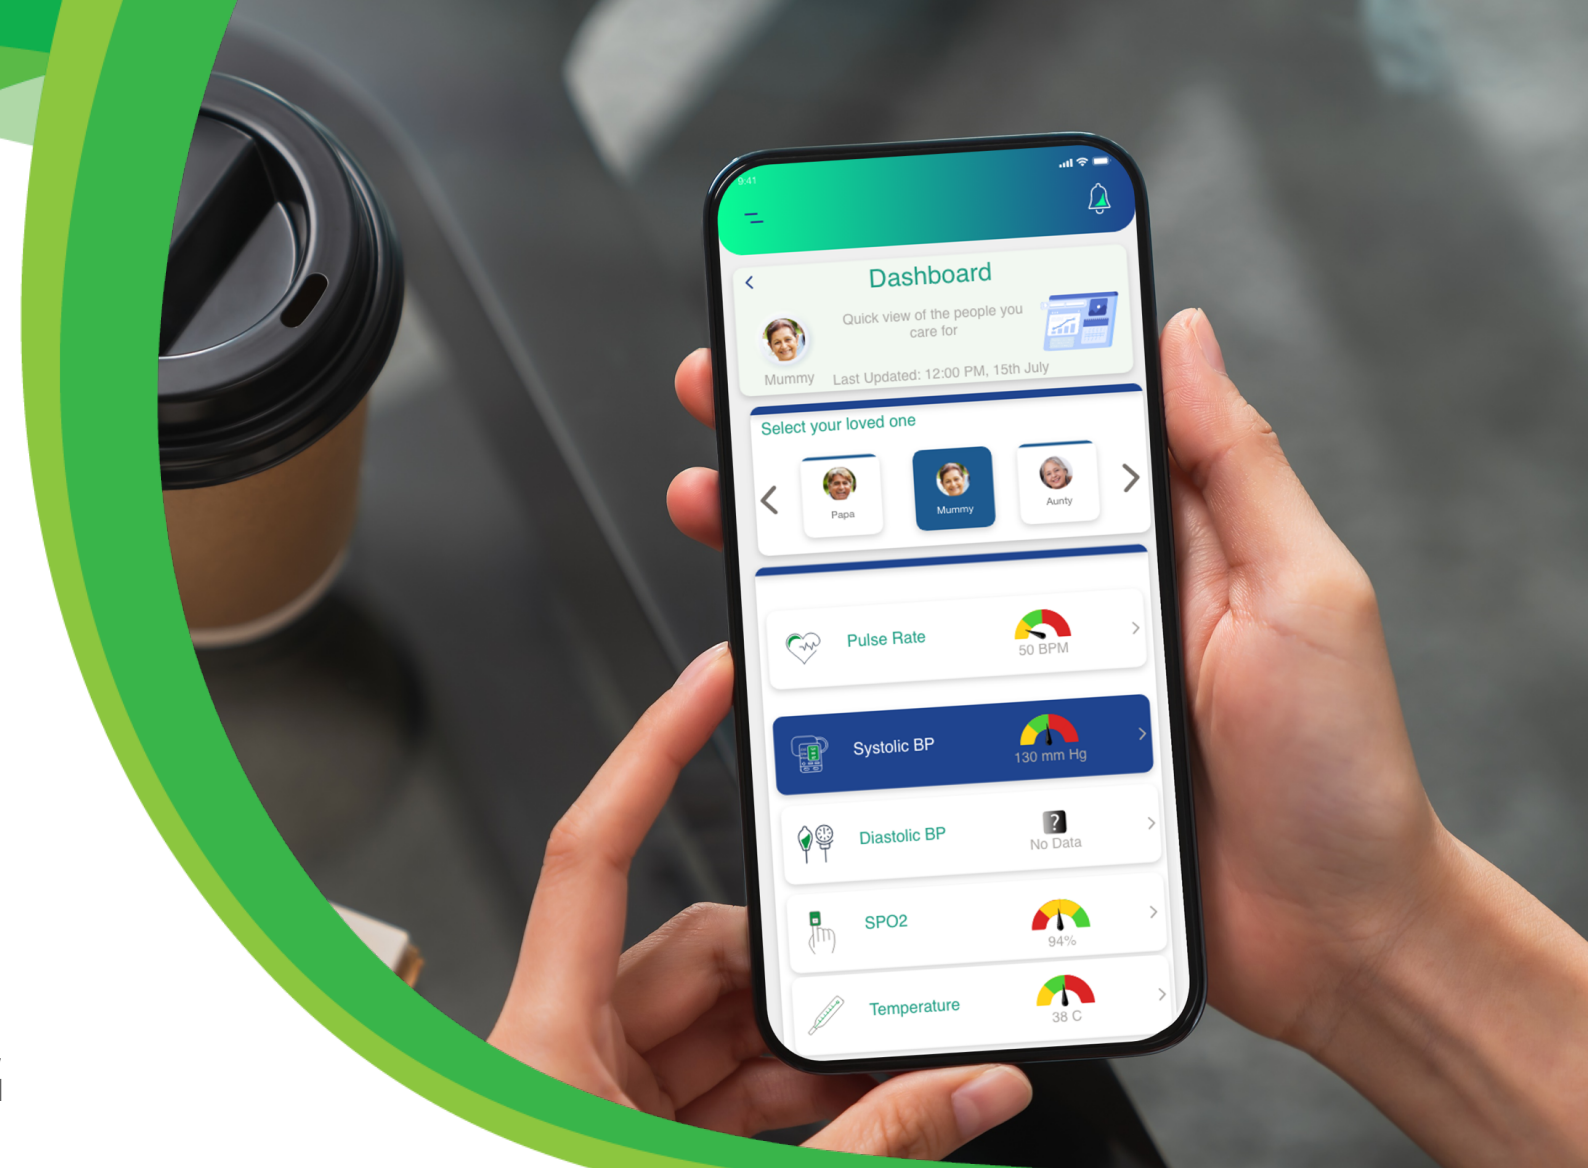

Customer-Centred Care Rings of Caring

The GlobalMedics.AI Care Ring App leverages two industry trends. The first is connecting people (patients/family/friends) into a collaborative social network, or 'Care Rings' of caring. The second is connected devices (mass-market smartwatches, sleep sensors, fall-detection radars, digital BP cuffs etc).

The platform also brings together an ecosystem of multi-disciplinary providers (doctors, health coaches, nutritionists, Yoga instructors etc.), who collaborate in real time to take each customer through a personalised chronic care plan. The burden of care is distributed among multiple providers, with your customer in the centre!

Automating patient vital signs and symptom capture and enabling self-care by patient and family frees up your staff's time to provide more human-based care, while enhancing job satisfaction and reducing burnouts. Delivering enhanced levels of care, at reduced efforts & costs.

Highway to Holistic Health

Your customers would go through a structured 4C process of comprehensive care:

- Care Ring:** Onboarding of patients, their families, and care givers into a trusted 'Social Network', supporting each other's health.
- Calibrating:** Initial health assessment by professionals (doctors, dieticians etc), assisted by AI-based tools. Personalised Care Plans.
- Caring:** Hybrid (digital + physical) interventions – counselling, education, medicines, exercises, nutrition, lifestyle changes etc.
- Continuing:** Proactive, tech-supported self-health-management. Remote monitoring & support by Care Ring members.

GlobalMedics.AI Virtual Hospital platform uploads validated customer-data into your claim systems through APIs and Robotic Process Automation. Reducing risk, cost, and time - to get the new solution delivering business KPIs quickly.
