Secure Identities and Access

Overcast
Up your business.
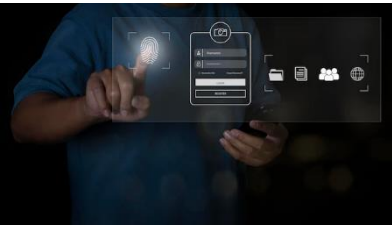

Identity and threat protection are top of mind for customers. Getting the identity right is a critical part of a Microsoft 365 project and it's the first place we start.

Workshop highlights

Get a rating of your identity security posture and see how you stack up against your peers

Gain insight into the applications used in your environment, including those not authorized by IT

Discover how to reduce costs and improve business agility and security with simplified access to applications

Understanding how to avoid compromised identities

95%

Of cyber security breaches are due to human error and 95% of breaches could have been avoided if proper cyber hygiene had been implemented.

Are you aware of suspicious users and login behavior in your environment? Are you threatened by ongoing suspicious requests?

With identity attacks on the rise, this workshop will show you how to stop tomorrow's data breaches by securing identities today.

By attending the workshop you will be able to:

We'll help you find the identity risks happening now in your environment, gain insight into your application landscape and improve your identity security posture.
