

# Mature Metrics

## Overview

MatureMetrics: The cybersecurity reporting tool that helps you improve your business level insight into your cybersecurity posture.

MatureMetrics is the industry's first and only automated NIST Cybersecurity Framework reporting tool. It provides a single pane view of all things cyber in business speak, making it easy for organizations to understand their cybersecurity posture and identify areas where they need to improve.

MatureMetrics is a valuable tool for any organization that wants to improve its cybersecurity posture. It is easy to use and provides comprehensive reporting that can be used to make informed decisions about cybersecurity investments.

The system will capture –

- Technical data: This includes data on your organization's security controls, such as firewalls, intrusion detection systems, and antivirus software.
- External data: This includes data on your organization's security posture from external sources, such as security ratings and threat intelligence feeds.
- Subjective data: This includes data on your organization's security culture and risk appetite.

MatureMetrics uses a proprietary algorithm to combine all of this data to create a single score that represents your organization's overall cybersecurity posture. This score can be used to track your progress over time and identify areas where you need to improve.

In addition to the overall score, MatureMetrics also provides detailed reports on specific aspects of your cybersecurity posture, such as:

- Asset management: This report shows you which assets are most critical to your business and how well they are protected.
- Vulnerability management: This report shows you which vulnerabilities are present in your systems and how they are being prioritized for remediation.
- Incident response: This report shows you how well your organization is prepared to respond to cybersecurity incidents.

MatureMetrics also provides a number of other features, such as:

- Customizable dashboards: You can create custom dashboards to track the metrics that are most important to your organization.
- Benchmarks: You can compare your cybersecurity posture to other organizations in your industry.
- Alerts: You can receive alerts when your cybersecurity posture changes or when new threats are identified.
