01. Solution Introduction

BRAIN X GPT
powered by ChatGPT API

BRAIN X GPT is an integrated GPT service built on Microsoft Azure OpenAI, allowing businesses to securely and easily leverage their data within a private environment.

Necessity

Who would need it?

Needs

CASE 1

Those considering the adoption of generative AI, but facing challenges in applying it to their business

CASE 2

Those experiencing difficulties in generating in-depth insights beyond simple data analysis repetition

CASE 3

Organizations holding vast amounts of structured data like ERP data but struggling with its utilization

Furthermore, BRAIN X GPT can be utilized in various other scenarios.

Why should adopt it?

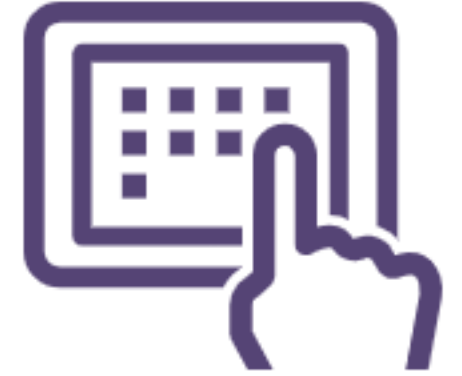

1. Non-experts can easily utilize data.
2. Rapid analysis enhances productivity.
3. Diverse departments can utilize it.
4. Can help with operational optimization.
5. Enhances the utility of internal data.

04. Key Features

Natural language-based Q&A

- Natural language-based insight extraction
- Easy and fast data analysis

Model/conversation style choices

- Choice of 'GPT 3.5/GPT 4.0/Bing' models
- Selection of 'creative/balanced/precise' modes for context-appropriate responses

Private environment setup

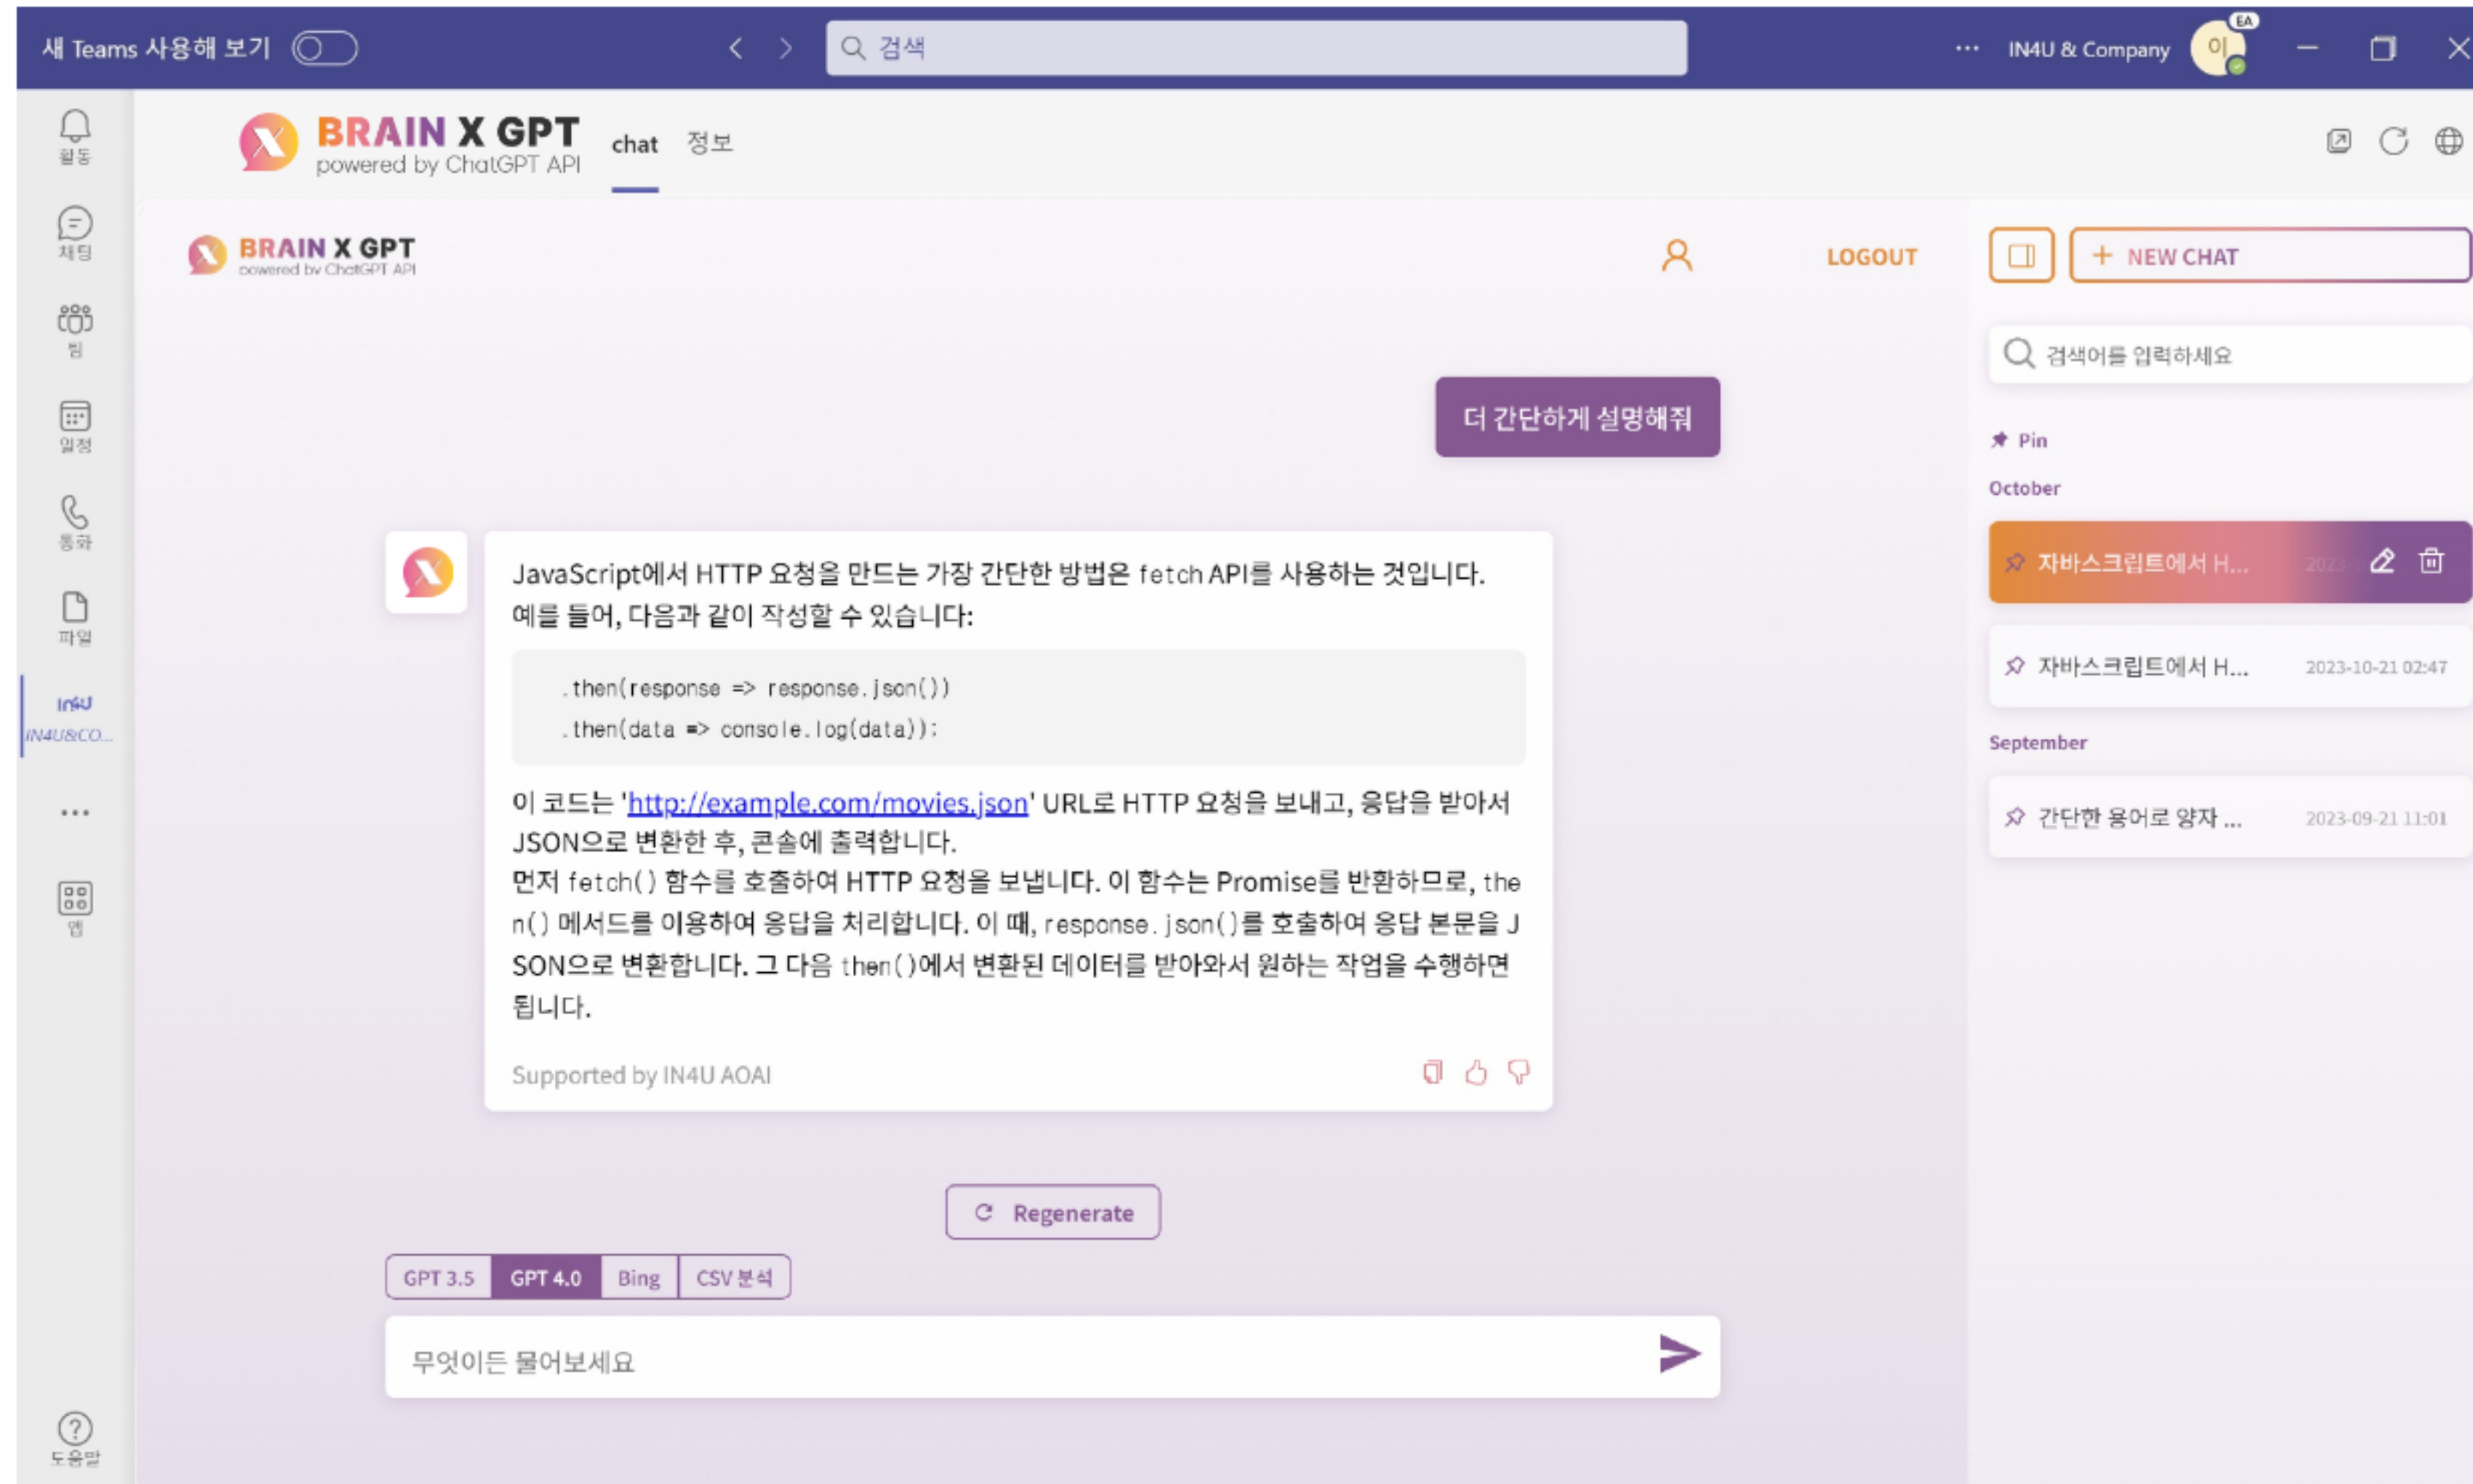

- Built on Azure Cloud for data and information protection
- Utilizes dedicated lines/IPs for input content filtering

Reasonable cost

- Providing services through both monthly subscription and deployment options to diversify choices

05. Demo Screens

Point 1

Enterprise's structured internal data can be queried and answered in natural language to obtain **data-driven insights**.

Point 2

Provide detailed information sources to verify **the accuracy** of natural language-based responses.

Point 3

Effortless management, including **checking and deleting** question histories, is possible.

06. Customer Cases

A **Company A**
In-house Private GPT Deployment

Built in the form of a Microsoft Teams in-app solution for use on the company network, and the Azure OpenAI solution has been implemented in a private environment to address data security concerns

B **Company B**
Structured Data Insights Solution

A solution has been established to obtain insights from structured data collected based on natural language. The service was provided to make data extraction and utilization easier for businesses.

C **Company C**
In-house Data Utilization Solution

Developed an internally integrated GPT in a security-enhanced private environment. Services for internal information filtering have been applied, and the use of the Bing API allows for acquiring the latest information.

D **Company D**
Item Inquiry Solution Development

Established an environment that enables querying and searching internal items' data in natural language. To make it easy to search for similar or numerous items, we have implemented a system.

E **Company E**
Utilization Solution with Graph API

Extracted and loaded internal data using the Graph API to enable its utilization. A solution has been applied to query in natural language and obtain summarized responses through Azure OpenAI.

F **Company F**
SAP Data Utilization Solution

Implemented to compare product categories and analyze profit and loss based on financial status using SAP BW data. Various business-based scenarios have been applied to enhance flexibility.
