Power Apps Health Check

2-day health check assessment on your organization's Power Apps deployments

Power Apps   Governance   Data

Code checks

✓ Conduct code reviews to identify risk areas and provide best practice recommendations

Pipelines

✓ Simplify and automate the deployment process by ensuring healthy, automated application lifecycle management (ALM) processes are in place including ALM automation and continuous integration and continuous delivery (CI/CD) capabilities

Data

✓ Examine where data is being sourced and stored by Power Apps

Usage

✓ Analyze usage activity and identify any key trends or findings

Governance

✓ Assess existing procedures and controls to provide guidance on improving and refining governance framework according to best practices

➕ Proactive instead of reactive   ➕ Increased data security and risk management   ➕ Improved sustainability/maintainability
