# Enterprise Mobility + Security Quickstart

For Nonprofit

Strengthen your mission with secure Data, Apps, and Devices.

Nonprofits today need agile, secure tools to support their causes remotely. This means that data and applications are available anywhere and anytime, often on multiple devices (laptop, mobile, tablet) to be able to work remote or from home as well. That means you also need to consider how to protect these resources from anywhere, on any device.

The Enterprise Mobility + Security Quickstart allows you to extend your existing infrastructure with a Mobile Device Management (MDM) and Mobile Application Management (MAM) solution within Microsoft 365. With the Enterprise Mobility + Security Quickstart, a comprehensive configuration and security policy is offered based on Microsoft and SoftwareOne best practices, to enable you to protect your critical resources and focus on your mission.

Securing your impact with SoftwareOne and Microsoft

Prepare
Broaden knowledge with the Enterprise Mobility + Security Quickstart workshop that explains and maps your organisation's (security) requirements.

Design
Preparation of a comprehensive design based on the input from the workshop and best practices.

Build
Realization of the Microsoft Enterprise Mobility + Security environment based on the approved design. During this phase, a separate handover session will take place including handing over extensive as-built documentation.

What are the benefits?

- Keep control over your organisational data, applications and devices.

- Enrich your environment with the Microsoft Enterprise Mobility + Security components Azure Entra Premium and Microsoft Intune.

- Keep control of business data on Bring-Your-Own-Devices (BYOD) without having to manage the device yourself.

- Automate the process of deploying Windows devices within your organisation.

- Pre-defined security policies for mobile devices, data and applications based on Microsoft and SoftwareOne best practices applied to your organisation's requirements.

What challenges do our customers face?

- Insufficient knowledge to manage data, applications and devices.

- No control over data and applications.

- Complying with legal and regulatory compliance standards.
