

Dell Application Modernization Services on Microsoft Azure

In order to contain costs, and improve scalability and agility organizations need to increase onboarding their apps to the cloud. Applications are typically built to run on specific operating systems in specific network architectures or developed for a single cloud platform. Moving an application to a new environment can be challenging. Companies, today are relying heavily on service providers to evaluate and implement cloud ready apps.

This service is designed to accelerate customer success in modernizing identified applications to be cloud native, leveraging the application services available in Azure. Acceleration is achieved both by providing deep subject matter expertise from Dell and through pairing opportunities for customer team members to learn cloud application skills, practices, and tools on-the-job. Together, the joint Dell and Customer team will assess, plan, refactor, configure, test, deploy, and transition customer's existing applications to utilize the relevant application services available in Azure.

Our team of experts will help you deliver the outcomes your business needs:

- Improved application deployment, configuration, customization and migration
- Continuous Delivery Process
- Increased Rate of Change for Apps
- Faster Release Management Cycle Time
- Cookbook of Patterns to Support Future Efforts
