

Simplified cloud adoption. More productive teams.

HTG's Modern Workplace Assessment Service takes a deep, data-driven look at your current digital infrastructure. Then, we assess and report on your readiness to migrate to a modern, cloud-based system.

You want to create a workplace that attracts new talent, supports your employees to do their best work, and enables you to deliver stellar service to your customers. Despite your experience, you're losing out to more agile competitors due to lagging, out-dated IT systems. That's why HTG offers qualifying companies a free audit. It's the first step towards the modern workplace of your dreams.

How it works

HTG supports ambitious businesses that are early in their cloud journey. If you're running on-premises email and file servers, you've got a basement full of server hardware or you haven't upgraded your hardware in years, then you're the ideal candidate.

We do people-first technology. So, expect the process to get - well - personal. Our data-driven process uncovers the boggles, the patch-fixes, the 'I'll get to that later's and the 'It works, so don't touch it's. We want to know how your systems work, and how you work. That way, we can give you the best recommendations. The whole process takes about four weeks and is fully funded by HTG and Microsoft.

What clients say

"HTG engineered and delivered a state of the art RDS platform that elevates our ability to provide production staff with a consistent and responsive user experience on the factory floor... Overall, I remain highly impressed and enthusiastically recommend HTG for their market leading IT consultation services."

Dr Richard Thomas
Dräger Safety UK

Project scope

This phase involves scanning your existing hardware and software and evaluating security and compliance features. We inventory all applicable operating systems and Microsoft (or otherwise) software, then identify cloud migration readiness based on that data.

Data analysis

Here, our experts analyse your architecture, reviewing your infrastructure for risks and opportunities. This takes into account your growth plans and business objectives, end user requirements, security gaps, refresh cycles, sunk costs and investments.

Strategic plan

We deliver a detailed report packed with insights and a cloud migration roadmap. We cover cost-benefit analyses for different scenarios, so you have the options laid out in front of you. And, you get virtualisation, Azure Active Directory and Surface recommendations, too.

Why HTG's Modern Workplace Assessment?

In-house technical expertise

Not only are we Microsoft Gold partners with a long-standing expertise in delivering cloud platform and productivity consultations, strategies and services, but we're also Advanced Specialists in Azure Virtual Desktop. Making IT work for the people that use it: that's our area of deep expertise. Our passion project. Our reason to be (in business).

Backed by Microsoft

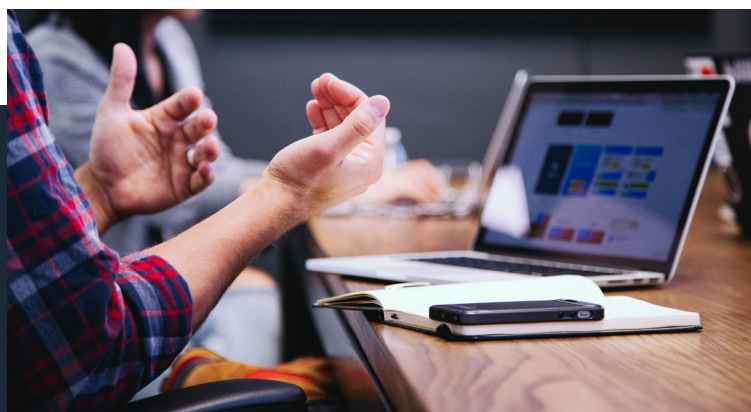

Hey, you've heard of them, right? That globally renowned Azure cloud platform... that suite of Microsoft 365 apps used by millions of companies... As a partner provider, we're backed by Microsoft's own technical team, meaning you get the attention of world-class experts to support your secure and modern workplace.

No unexpected fires

When you hire a qualified electrician, they know to turn the mains off before poking around your wiring. No worrying bang. No fire brigade. It's the same with HTG. We can ensure your migration will be a smooth process because we know what kinds of issues get in the way. For example, if you're still running Office 2010, then that needs to be updated, too. Our systematic analysis, combined with our experience, results in a roadmap to empower your workforce with the right tools, applications and services - oh, and we'll keep the lights on throughout the process, of course.

Intelligent tooling

We use the latest tooling in our assessment process, which - again - is entirely free for your organisation. Microsoft foots the bill, and we get to deploy clever diagnostic technology to support developing your recommendations. It's a win-win. The Modern Workplace assessment provides you with visibility into your environments and a comprehensive understanding of the opportunities available, all within an optimal time-frame. Weeks, not months.

Key use cases

Hybrid office

In all likelihood, the majority of businesses will adopt (or have already adopted) a hybrid working approach. That means some amount of distributed teams, remote working and flexible device-use are par for the course. This makes a digital workplace in the cloud - that can be accessed from anywhere - essential.

Virtual desktops

We're specialists in virtual desktops, including Azure Virtual Desktop. This is our wheelhouse. With AVD, you get a secure, portal-style experience into your work systems, files, tools and apps. It means everything stays locked within a safe environment, but you give your employees the access they need to do their jobs, and do them well. It all starts with the cloud.

Sustainable IT

Think system longevity. Scalability. Growth. Architecture that you can extend as much as you like (no planning permission required!). All based on an efficient, cost-effective, eco-friendly platform: Azure. Good for your business, good for the future.
