EXCHANGE PRO

Automate and Simplify Your Exchange Migration

Exchange Pro automates and simplifies enterprise Exchange migrations within a current Exchange environment, to later Exchange versions, or even to Office 365. Exchange Pro does much more than merely move mailbox data—it moves users. Users can go to a portal to see when the migration will happen, sign up for SMS and email notifications, and even choose another migration date. Admins get their own console that lets them manage the entire migration from a single place. It automates data collection, scheduling, reporting, and user communication—all of which are critical to a successful migration. Exchange Pro runs on Microsoft technologies like Windows Server, IIS, and .NET, and it includes a SQL database and a PowerShell migration engine. The result is a lightning-quick migration that's 10 times faster than other tools.

Exchange Pro migrates you to modern versions of Exchange, or even to Office 365.

MIGRATE

Move data and users

- › Migrate to modern versions of Exchange or to Office 365
- › Migrate Public Folder data and permissions using optional Exchange Pro Public Folders
- › Latest PowerShell engine for a fast migration experience

AUTOMATE

Save time and manage efficiently

- › Avoid breaking delegations with automation and time-saving features
- › Schedule migrations to fit your calendar demands
- › Web-based admin console to manage every aspect of the project, efficiently

CONFIGURE

Gain insight and customization

- › Configure nearly 100 attributes
- › Admin console to view everything in one location
- › Built-in reports give real-time views of the migration
- › Charts and diagrams to stay informed of every migration job
