Governance Report for Power BI

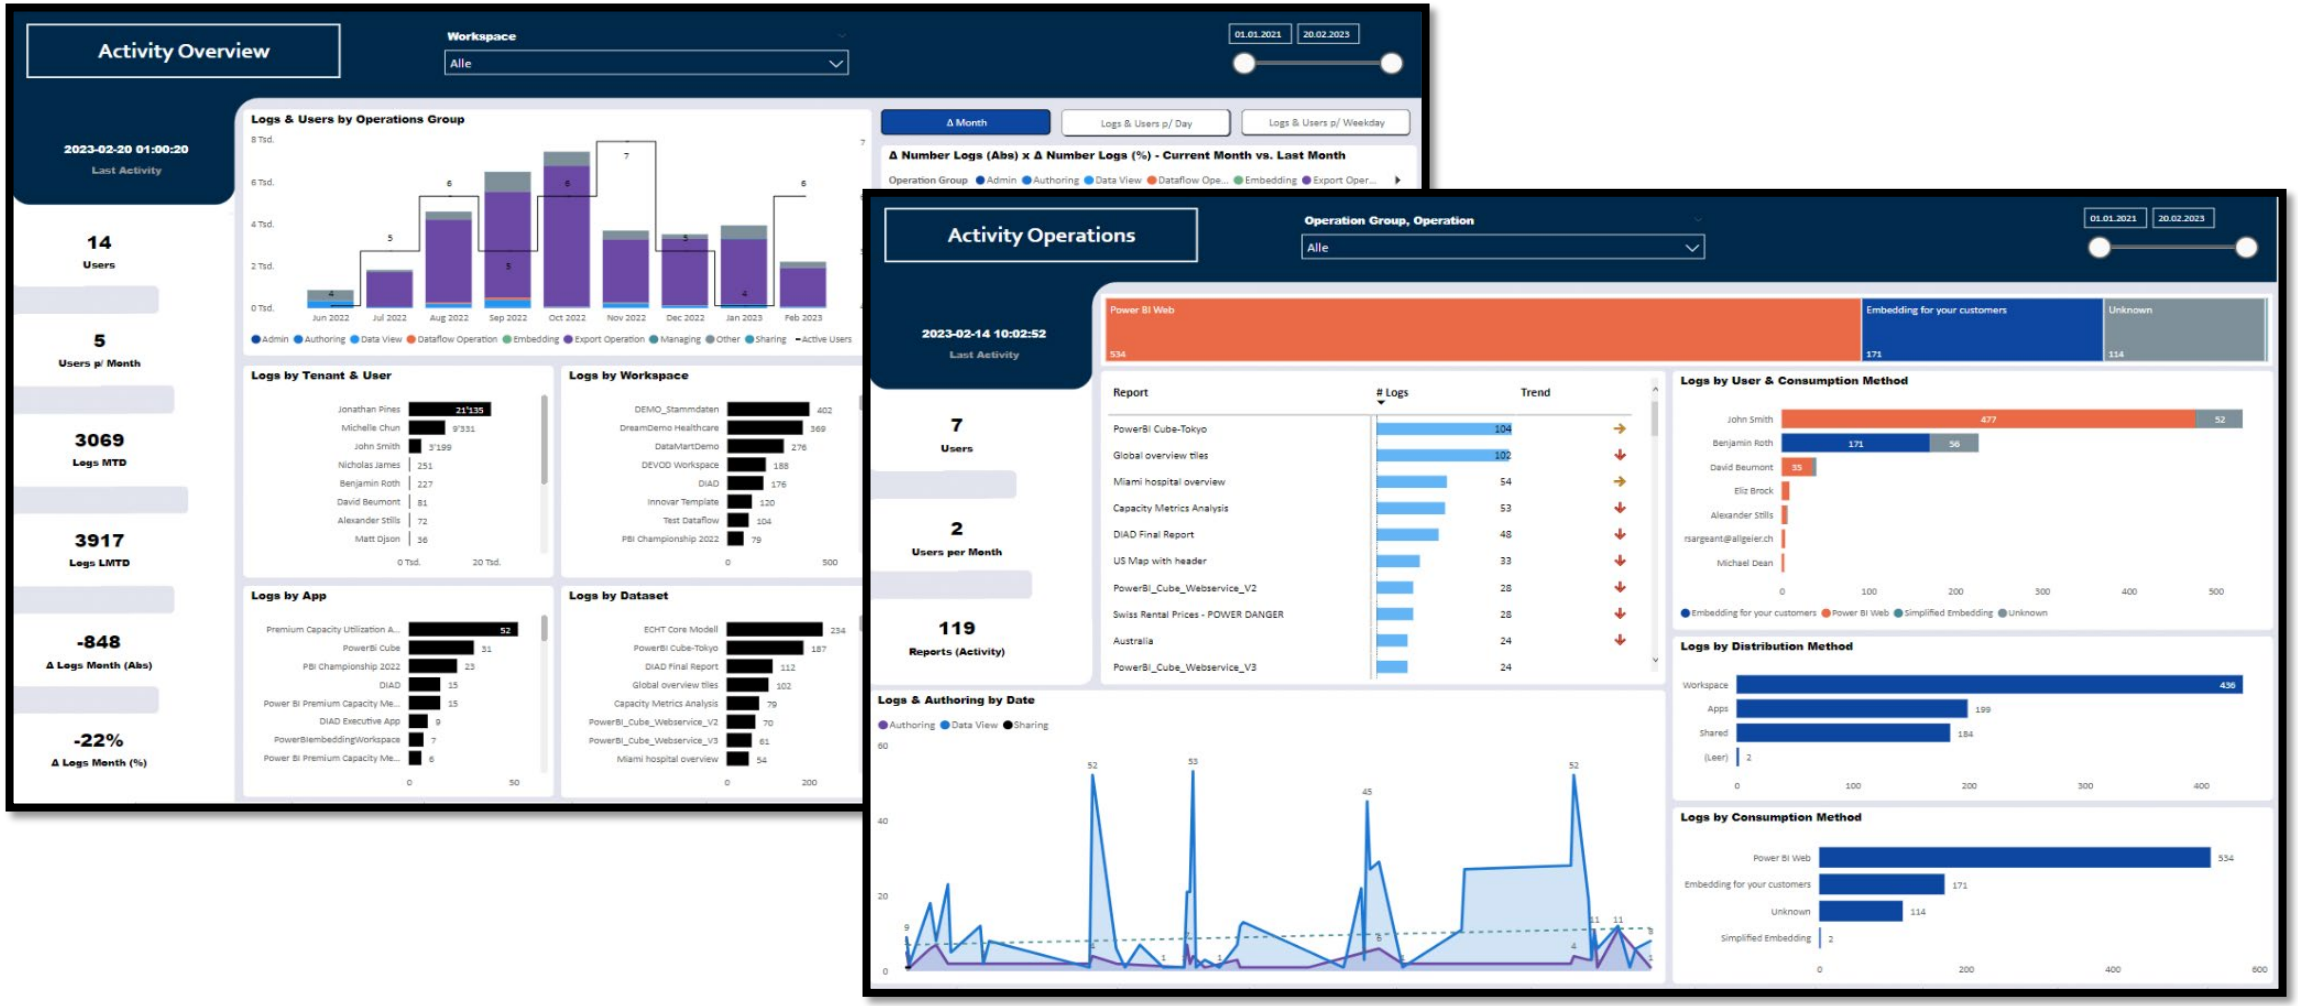
Governance Report for Power BI

The Governance Report for Power BI gives you an overview of the tenant-level metadata from your Power BI Service, leveraging the Power BI REST APIs and MS Graph API.

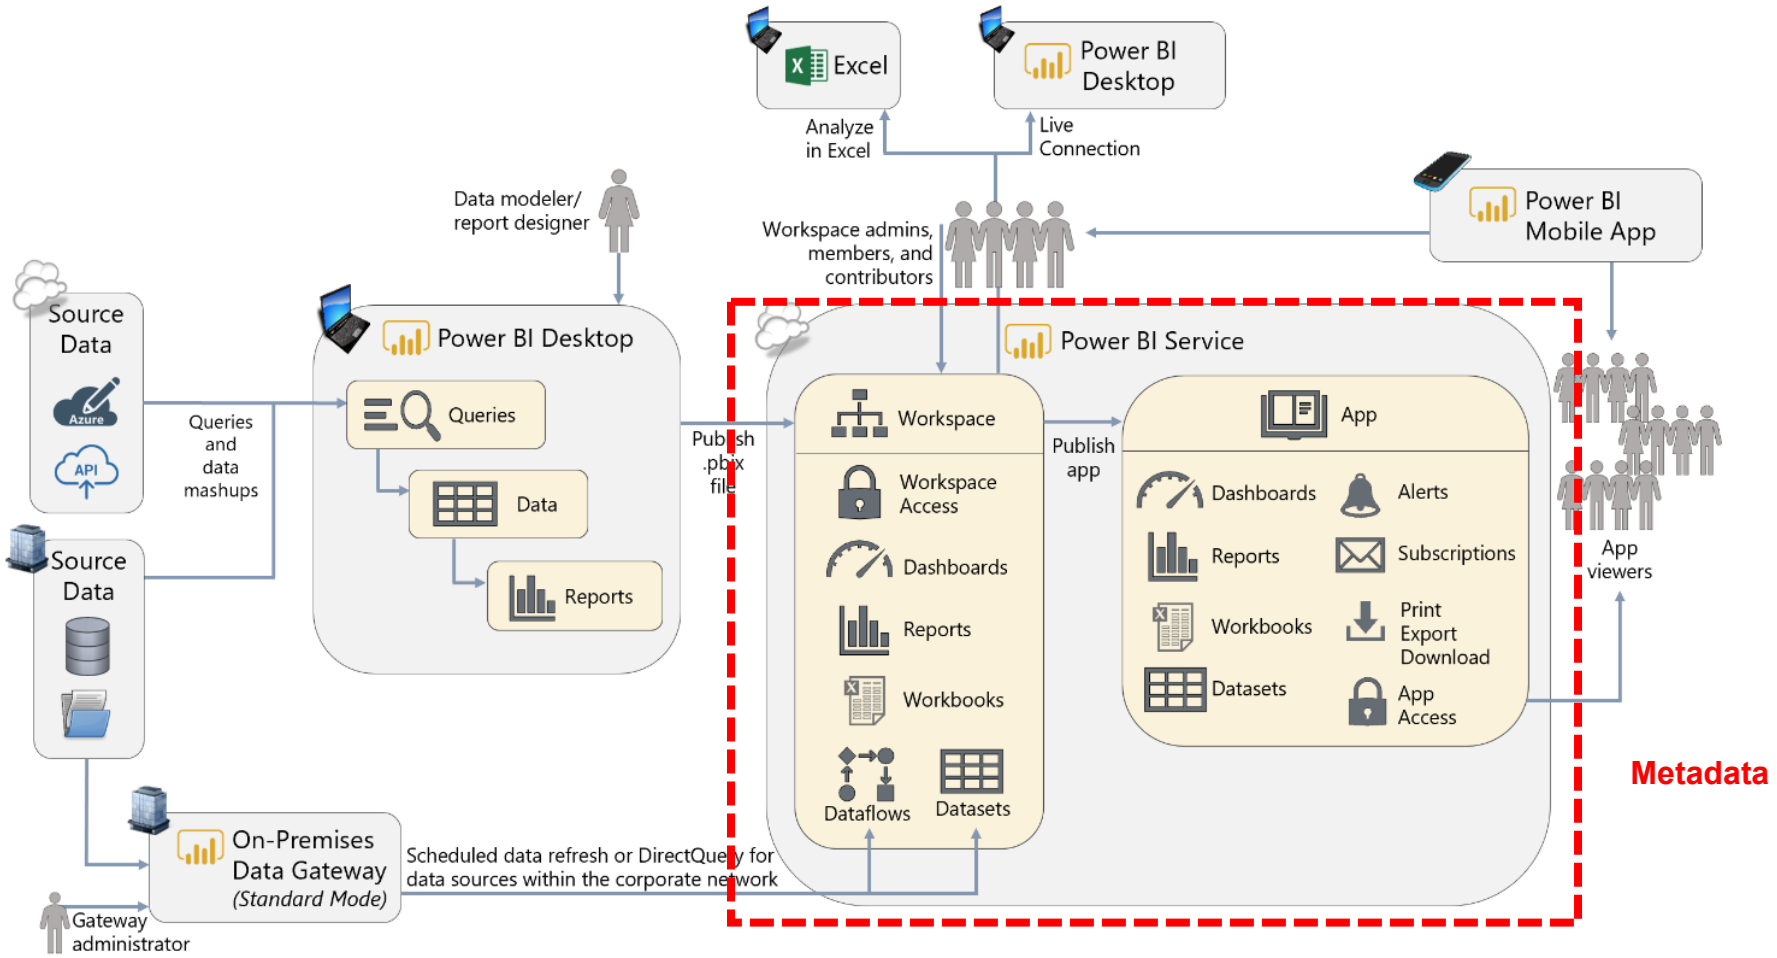
The information gathered and visualized, allows you to keep track of the data being used and the reports being built, enabling everyone in your business to create reports and dashboards, whilst staying vigilant of user activities as well as the permissions mapped to them. This oversight safeguards your company and assists in data governance by allowing security and compliance guidelines, such as GDPR, to be tracked and met.

Categories: Security, Monitoring & Diagnostics

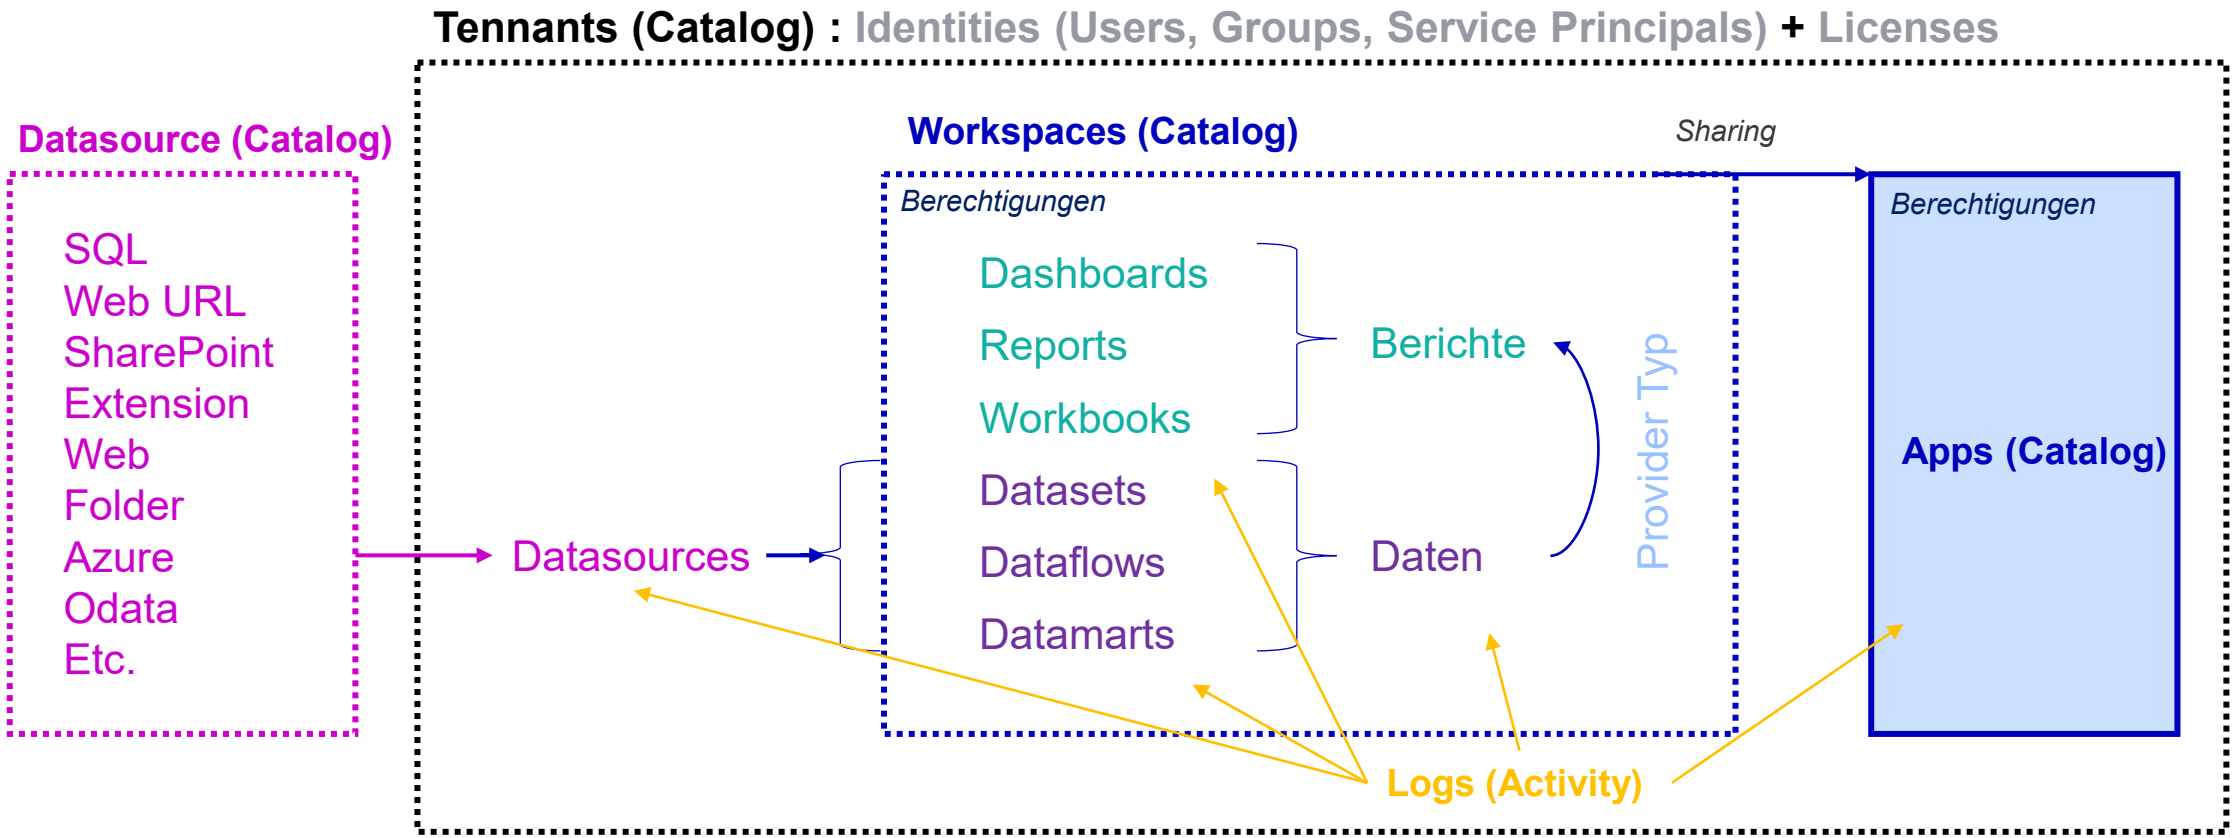
Governance Report for Power BI



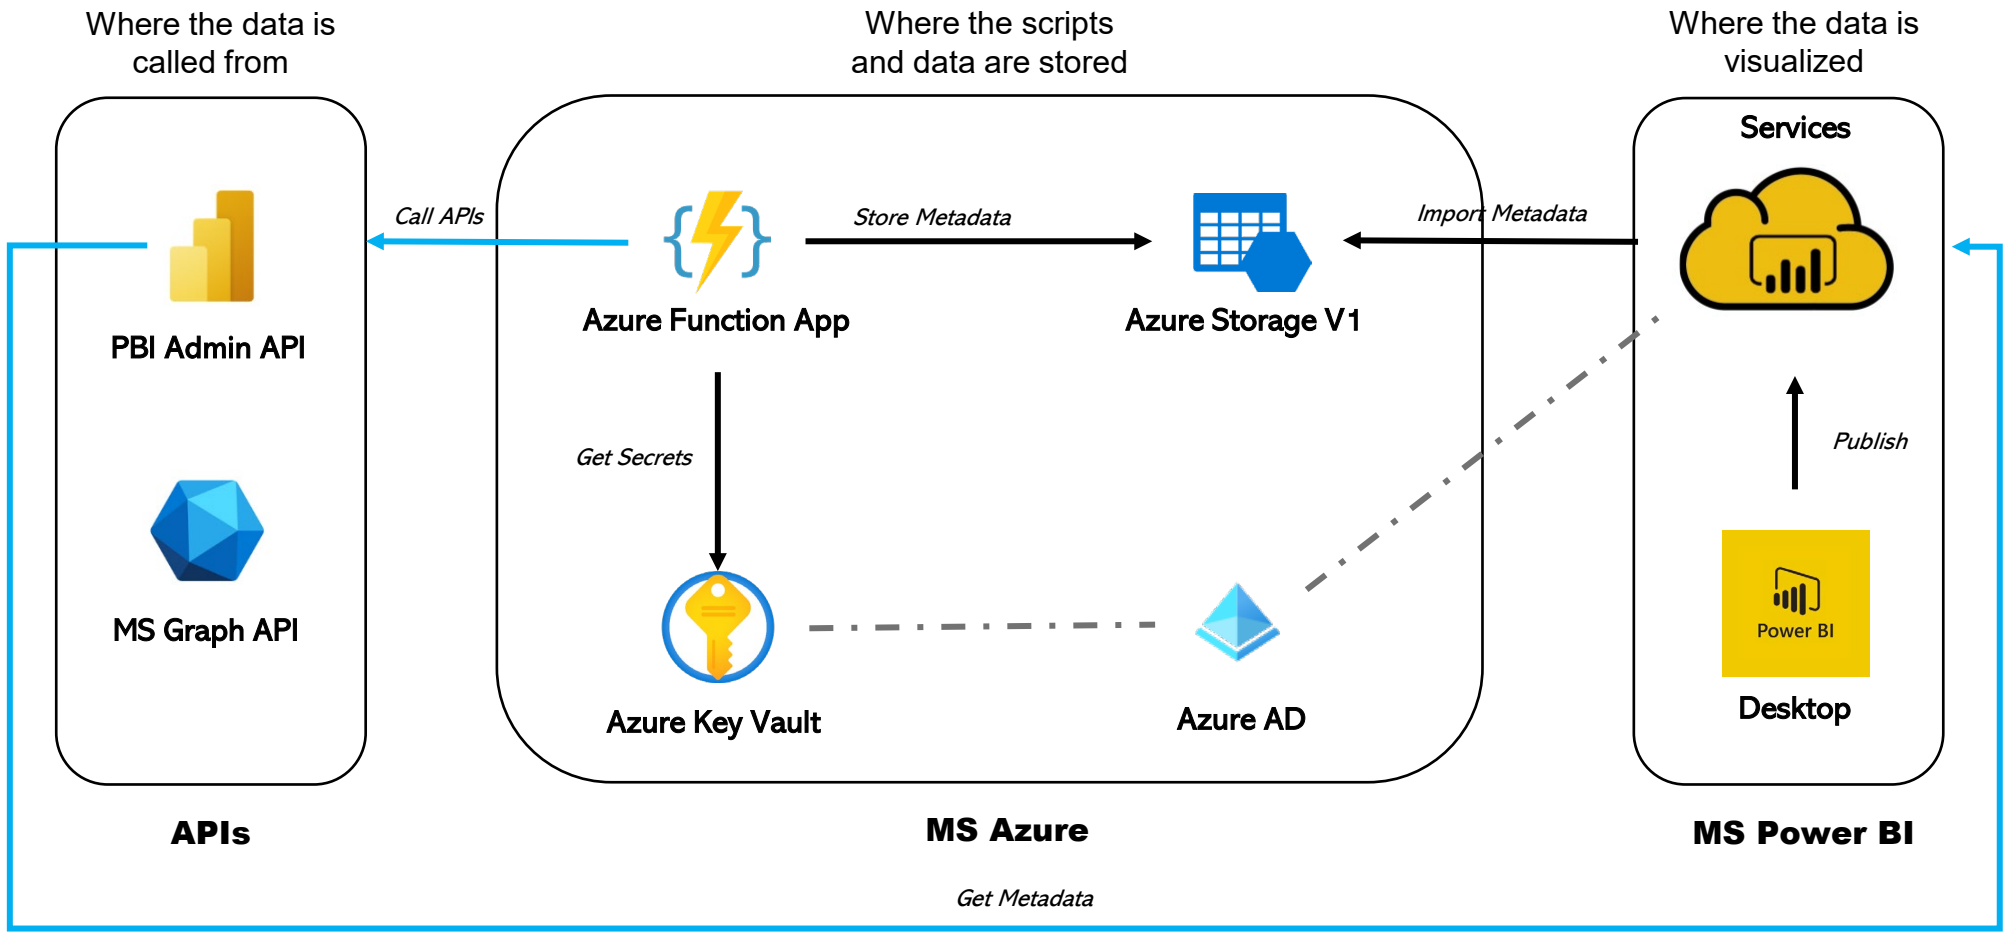
Architecture in Power BI



What Metadata is available?



Backend Build



Questions this report answers

1. How many users are there on the tenant and workspaces?
2. How many objects (dataset, dataflow, datamart, report, app) are there on the tenant and workspaces?
3. How many days of inactivity are there?
4. What is the overall activity trend?
5. How much activity was there per workspace, dataset, dataflow, datamart, report, app.
6. Which type of activity, when, by whom and where was it executed?
7. Who (user, service prinicipal, security group) has what permissions?
8. How many licenses and to whom are they mapped to on the tenant?
9. What data sources are currently being used in which dataset, dataflow and / or datamart?
10. What SQL statements are being used to query data?
11. What DAX functions are being implemented per report?
12. What M code are being implemented per report?

Cost Overview

Azure Function App uses a **Consumption Plan**
Azure Storage is **general-purpose V1 (Blob Storage)**
