artig.io

Welcome to Virtual Museum.

Digitalisation is now one of the priorities of global cultural policy. Conversion of content and artifacts into digital media not only consolidates and protects invaluable museum archives collections but most of all makes them published online.

Save the Past for the Future.

Artig.io provides software solution that enables you to classify and create inclusive collection of data preserving, protecting and sharing the cultural heritage, making it more accessible and engaging for the public.

We select, organize and share of source material in an attractive form with no limits.

This is also a technology for creative, interactive education.

The imaginative technology captures unique content and brings it into the XXI century.

Collect

The idea behind digital library is to transform analogue content into digital media. BASE is designed for digitising, archiving and indexing valuable documents, records and artifacts.

- ◆ flexible and scalable database with high security standard

Create

BRIGHT is an innovative presentation software that uses digitised content and brings to life historic artifacts, documents and testimonials, making your exhibitions unforgettable.

- ◆ set of tools for content management and creative presentation

Share

Digitalisation means sharing collections in a way that will engage and encourage visitors to use virtual resources. Artig.io also allows you to display digitised content

- ◆ easy integration with social media and other technologies and tools such as VR, AR, mobile, holograms, 3D printing.

Artig.io solutions include innovative data storage system, that simplifies management of gathered heritage collections and access to them.

- Wojciech Florczyk, CEO of New Amsterdam
