Cross-departmental use | API-enabled integration | Mobile application

On-Cloud & On-Premises | Encryption and Blockchain | Seamless automation (RPA) capabilities

Integration with third party business systems

Use Cases

E-stamp for Online Document Signing

Eliminate the manual hassle of locating stamp paper vendors, waiting in queues, and acquiring them, along with uncertainties about the purpose of purchased stamp papers and the parties' reliability. Improve security by eliminating physical storage vulnerabilities and the potential for fraud with Cygnature's E-stamp feature.

Automated Bulk Signing Solution

The manual signing of various documents in large volumes is a time-consuming and ineffective process that hampers productivity. The automated Bulk Signing utility offers an automated, secure, and efficient way to digitally sign all document types. This eliminates human intervention, reduces costs, and saves time, while maintaining a compliant workflow.

Automate document signing in HR

Streamline Employee onboarding and management processes by incorporating Robotic Process Automation (RPA) with Cygnature- A digital signing solution. Automate and simplify the entire document signing process reducing delays and security risks.

21 CFR Part 11 Module

Cygnature's CFR module fulfills every criterion to comply with FDA's 21 CFR Part 11 regulation and EU Annex 11, including workflow creation, signing roles, user authentication, electronic signatures and audit trails. This module is specially designed for pharma, life sciences and medical equipment companies and their QA teams.

Paperless operations

Remote document signing

Online stamp paper procurement

Robust authentication

LIVE webcam signing

Secure cloud storage & retrieval

Automatically e-mail signed documents

User authentication

Signed documents saved in application database

Active directory integration

Scheduled operations

Both server-side & API-based signing workflow

Single DSC & multiple DSC support

Single page & multi page signing

Place signature based on text location

First/Last/Custom page signing

Provide access to authorized individuals only (no guest access)

Record a computer-generated time-stamped audit trail

Signature appearance with name of signer, date, and time of signing and the reason for signing

Authenticate the signer while applying for the signatures

Use access code in combination with password

Approval workflow

Solution Highlights

Supports any file format and upload source	Create reusable templates	Create customized signing workflow	Assign roles to signers – author, approver, reviewer
Set Observers	Options to sign, decline, assign or co-sign and many more	Set Due Date, Reminders, Comments and Private Message	Digitally Sign the Document
Bulk sending & signing of documents	Enforce location capture	Document Verification and receive certificate of completion	Automatically e-mail signed documents

CYGNATURE

by Cygnet Infotech

is a feature-rich solution that provides APIs for seamless integration with businesses. This blockchain-based digital signing solution offers secure authentication for signers. With Cygnature, users can sign documents from anywhere, anytime, using any device quickly. It provides enhanced security, greater transparency, and improved traceability of the signing process, along with authentication of the signer's identity.

Cygnet Infotech, established in 2000, is a global tech organization with a widespread presence in India, USA, Europe, UK, UAE, SA, Aus, and more. Working with clients in 35 countries, they boast a robust team of 1000+ experts specializing in cutting-edge technologies like Hyper automation, AI & ML, and Blockchain, focusing on microservices architecture. Their offerings encompass a diverse range of products, platforms, and services, spanning Product Engineering, RPA, Test Automation, Digital Transformation, Tax Technology, Fintech, and Digital Signature.
