Applications

Why Scappman? Updating applications and keeping them up to date should be easy. In reality it's a time consuming and expensive task. That's why we created Scappman.

Over the years we experienced these problems in every major company we worked with. For every application update, you should create a package. This package needs to be installed on all computers and needs to be monitored. Most companies don't have the resources to do this. That's why we're offering a 100% cloud solution that automatically installs all the necessary updates for your applications. It's that straight forward.

Let's tune in and keep your employees secure and up to date.

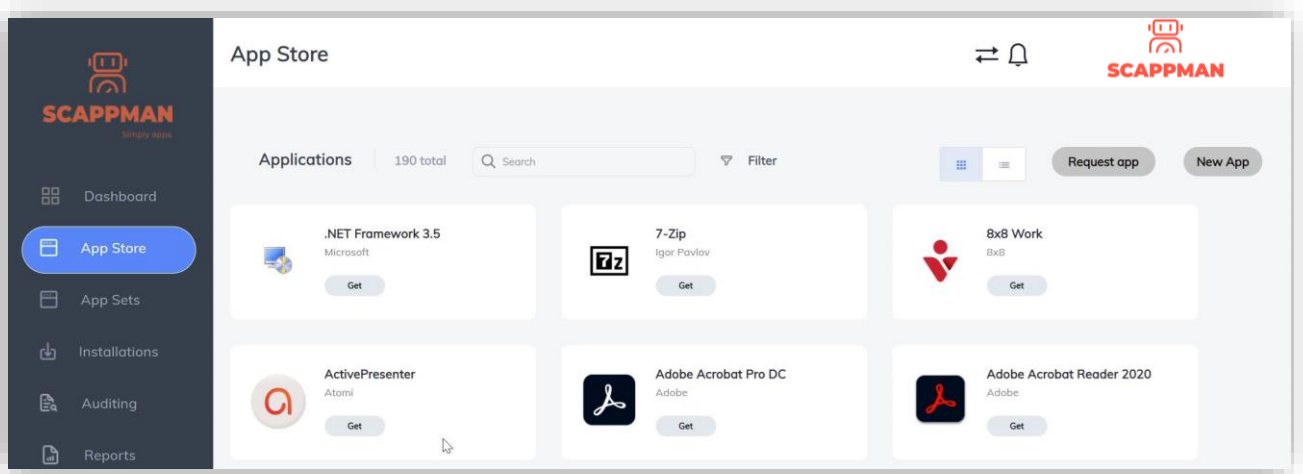

It's all about focus. As a company and especially an IT department you want to focus on your day-to-day tasks not worry about applications, bugs, IT-security or compatibility.

access to your company. Together we'll make sure that hackers can't use vulnerabilities in outdated applications to steal or encrypt your data.

These challenges can cause major security holes and some of them can even be used as a backdoor to gain

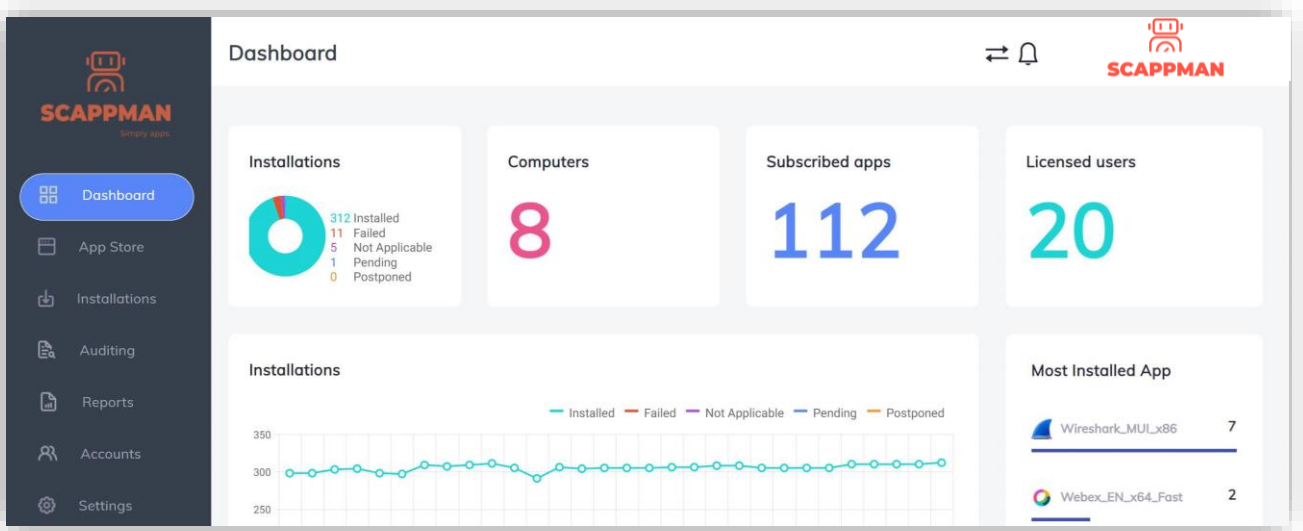

What we offer?

Scappman is 100% cloud! Fully integrated with Microsoft Endpoint Manager and doesn't require any servers or agents to install and update your applications. We give you a clear overview of all your managed applications and their version.

Thanks to application update rings we make it easy to test and validate updates, while adding advanced functionality like updating available applications, user notifications during updates, private applications and enabling 8GB+ installation file size.
