

In today's climate, how can one person make a difference?

Now more than ever, people in organisations want to reduce their carbon footprint as part of their sustainability objectives, with some already committing to achieving net-zero goals. However, many individuals don't know where to start for monitoring progress towards these targets.

Introducing EnviroTrak from Ingentive.

Harnessing the latest in Microsoft technologies, Ingentive has developed a exclusive solution that allows organisations to make informed data-driven decisions around their sustainability goals and objectives.

Built natively via Microsoft Teams, EnviroTrak is designed to be accessible for all, so that each and every individual can contribute to your organisation's performance, whilst maximising your existing Microsoft investment.

Visualising the data is no longer enough, we must act on the results.

You can measure, track, report and action sustainability goals with Personal, Project and Organisation level views against your carbon footprint and KPI's. With added elements of gamification, you have the ability to encourage company-wide collaboration and communication effectively through your own customised dashboard.

Employees can collaborate and communicate, and praise each other, based on performances. In addition, you can share content, hints, and tips so that everyone can learn from their sustainability contributions.

Personal

Employees can input individual and project carbon data with an overview of all projects they are involved in.

Project

Regular notifications of project progress and contributions towards organisational sustainability targets.

Organisation

Company-wide overview with ability to track individual and project progress against sustainability goals.
