

REHABKIT

Personalized VR therapy
at the touch of a button!

EvolvRehab® is a CE marked **virtual rehabilitation platform** which has been used globally since 2011 to provide **clinical and telerehabilitation services for neurological and age-related conditions.**

Patients can perform engaging and intensive **therapeutic activities** in clinics and in the comfort of their own homes through the **personalized exergames, ROM assessments** and library of exercises activities of EvolvRehab®.

EvolvRehab® can be used to help treat a wide **variety of neurological and age-related conditions and diseases** including stroke, Multiple Sclerosis, Parkinson's, Cerebral Palsy, TBIs, post-Covid, frailty as well as to promote healthy ageing in older adults.

Therapists use the EvolvRehab® Manager to **remotely set up** patient profiles, **prescribe treatment plans** consisting of personalized virtual therapy activities, **monitor patient adherence and results** and communicate with patients via in-app messages or through video calls. **Reports can be published** showing patient performance for clinical or reimbursement purposes.

The Evolv RehabKit **includes all the hardware necessary** to provide virtual rehabilitation services in clinics and in patients' homes. It incorporates the **Azure Kinect 3D camera-sensor** which uses AI for precise body tracking, as well as a powerful **mini pc**.

The RehabKit only needs to be connected to a power outlet, an internet connection and a TV to begin providing EvolvRehab[®] therapy in clinics and at home. The simple one-button start system means **no technology experience is required**.

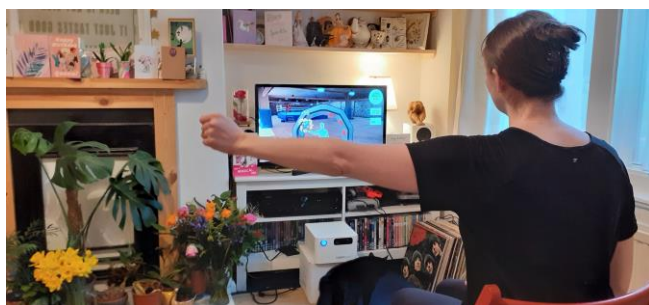

The RehabKit allows patients to have **greater autonomy** when choosing when to do their rehabilitation, yet it also allows them to maintain direct contact with their therapists to **ensure adherence and continuum of care**.

EvolvRehab has successfully been **used in 10 countries** to provide Telerehabilitation for brain injury patients and prevention services to frail older adults in residential care homes and in community centres.

“EvolvRehab sets good goals. It’s helped me improve my range of movement and made me stretch and challenge myself more. It’s magic!”
Dave Lea, UK Chronic stroke patient

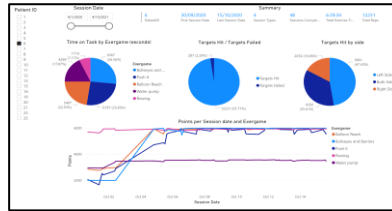

“We know that rehabilitation is vitally important for upper limb recovery. Repetitive training is one component, but it is often not motivating. We should be striving to create enriched environments for our patients to recover in, and the Evolv RehabKits are a great way of contributing to that in their own home.”

Professor Nick Ward, Consultant Neurologist, Head of Queen Square Upper Limb Neurorehabilitation Programme

EvolvRehab® Characteristics for Clinics & Telerehabilitation

For Therapists

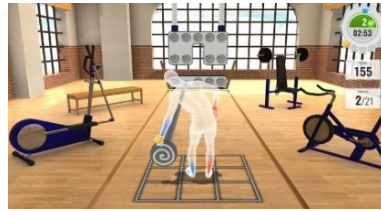

- ✓ Setting up of patient profiles
