Security Hyperautomation Copilot

Blink Copilot

Hyperautomation for your security tasks and workflows using generative AI
Learn more at blinkops.com

Let Blink Copilot automate your work

1

## Ask Blink Copilot to handle a workflow for you

Blink Copilot is trained on thousands of APIs and hundreds of 3rd party integrations. Creating a new workflow automation is as simple as typing a text prompt.
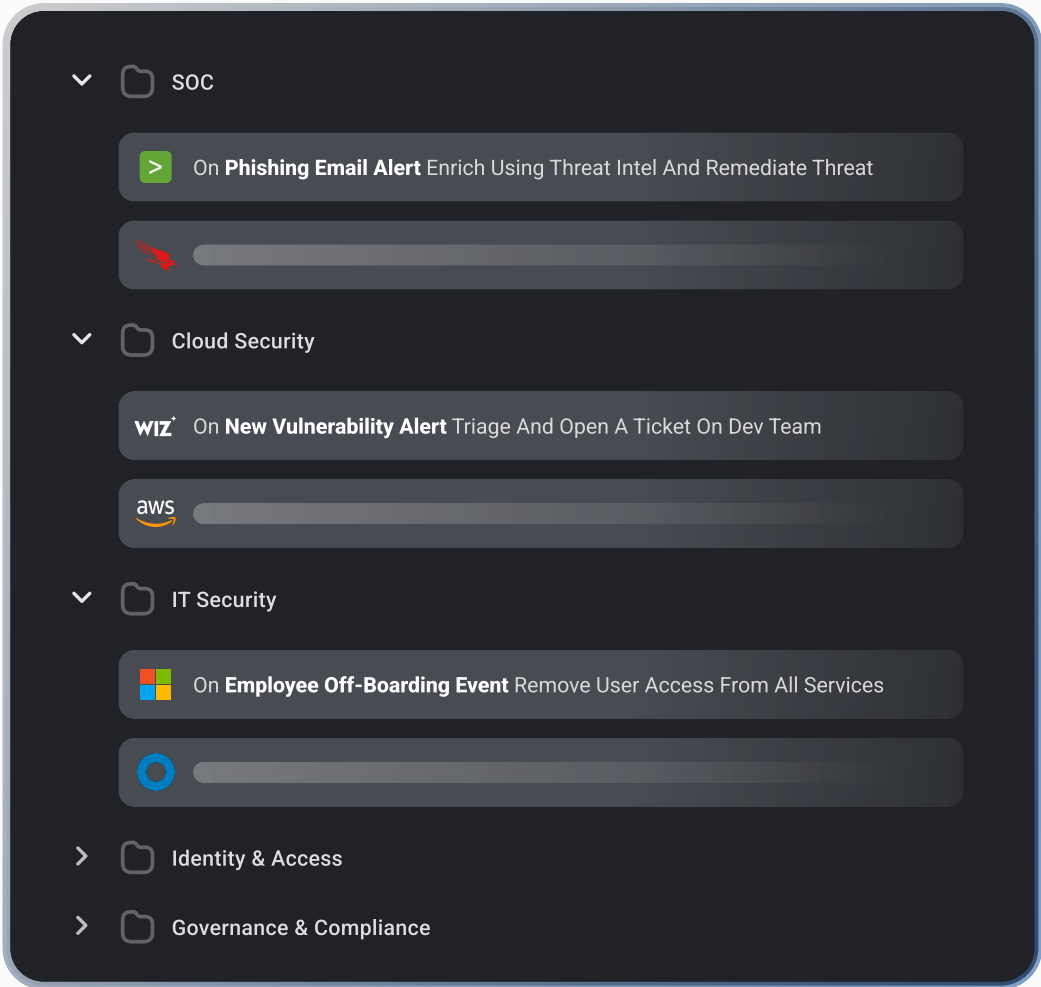

Find IOC across all Gmail Inboxes |

2

Review the workflow

Within seconds, Blink Copilot generates a functioning low-code workflow. Review the workflow before publishing to production.

Find IOC across all Gmail Inboxes and delete malicious emails
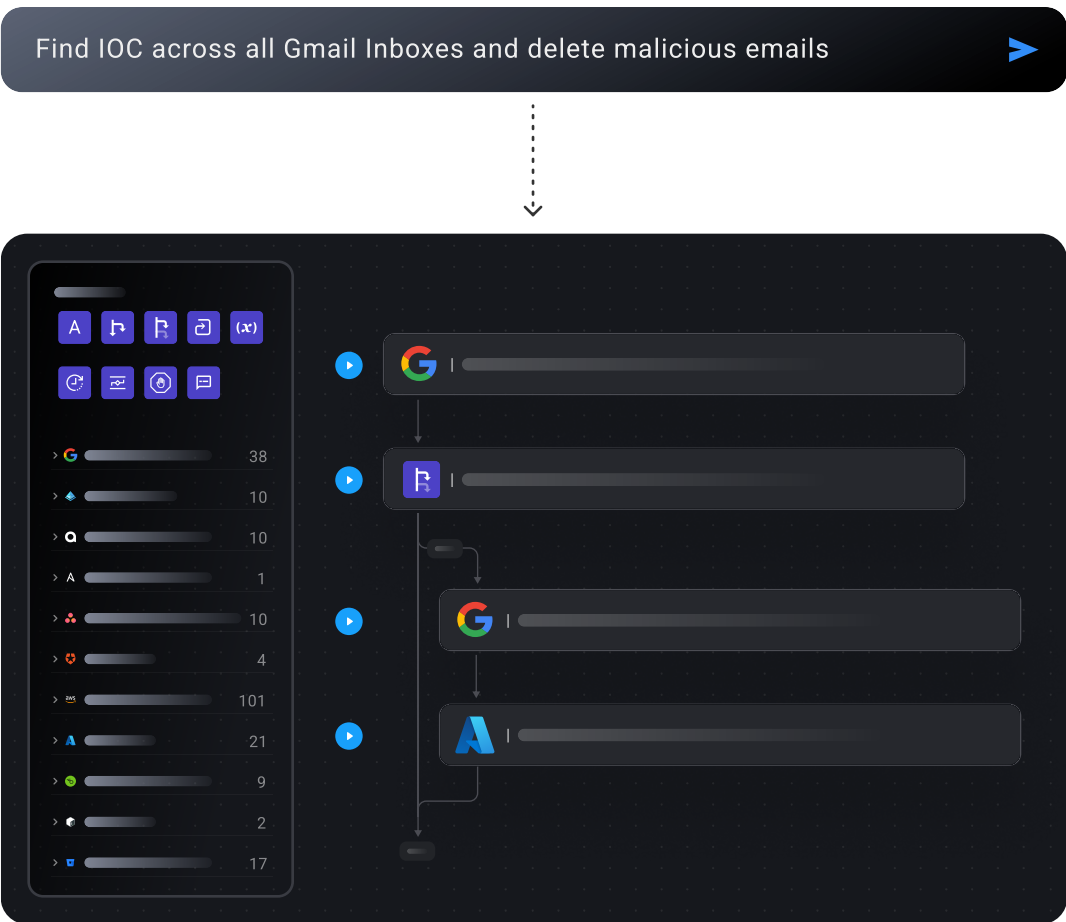

3

Run the workflow

Blink is cloud-native by design. Blink runners may be deployed on-premise or across any cloud provider.

SOC
On **Phishing Email Alert** Enrich Using Threat Intel And Remediate Threat

Cloud Security
WIZ On **New Vulnerability Alert** Triage And Open A Ticket On Dev Team
aws

IT Security
On **Employee Off-Boarding Event** Remove User Access From All Services

Identity & Access

Governance & Compliance

Empower Multiple Teams to Collaborate

Configure secure workspaces where you can build and organize all your automations, scripts, and APIs.

✓ Rich RBAC and SSO
✓ Supports all major cloud providers
✓ Bring your own Secret Manager
✓ Deploy runners anywhere

Cloud Security
Continuously monitor and manage your cloud security, set custom guardrails, automate remediation, security patches, and compliance reporting workflows.

Data Security
Find risks, enforce data and privacy policies, shift-left DLP, and take action across your organization when risky permissions, credentials, or PII is being shared.

Network Security
Shift-left network access, scan for network changes or misconfigurations and immediately take actions to quarantine, monitor, or block risky devices.

Endpoint Security
Shift-left endpoint policy management, extend your EDR/XDR workflows and kickstart auto remediation steps when issues get detected.

Email Security
Identify phishing attacks, inform users about risky emails, enforce 2FA, and take action when attacks are detected to minimize the impact of security breaches.

Credential Security
Protect your business with powerful automations to help identify when keys, secrets, and other vulnerable information are being shared across your cloud environments.

Identity & Access
Shift-left access requests, streamline IAM flows across services and unblock developers while keeping your applications secure and maximizing ROI in identity management tools.

Compliance
Continuously monitor your cloud application for SOC2, ISO, GDPR, or other compliance checks and enforce controls across your entire organization.

Threat Hunting
Automatically enrich security alerts and kickstart remediation workflows across your observability, issue tracking, and infrastructure tools.

SaaS Security
Reduce risky behaviors in 3rd party SaaS and collaboration tools with purpose-built automations that help you enforce organizational policies.

SOC & Incident Response
Decrease MTTR and resolve SIEM alerts faster by extending your incident response workflows with Blink automations.
