

INVISO KickStarter

The KickStarter program is designed to support customers who are ready to start taking advantage of modern technology with a production pilot to show the benefits and values of their investment in Microsoft solutions and benefits gained through full adoption.

Inviso will work with you to determine what focus area could benefit from a “kick start” engagement, that will speed up the adoption process and realized benefits of the software

Modern Work + Security

Compliance

- Purview
- *Priva

Identity

- Entra+ Security

Cloud Endpoints

- Intune
- Defender for Endpoint
- Defender for Office
- W365
- AVD

Kickstarting the Adoption

Planning and Kick off

Gather information about the organization's business objectives and current security posture.

Agree on Product Selection and deployment timeline.

Requirements Gathering

Engage with Inviso in a series of interactive workshops and discovery sessions to better understand the features and functionalities of the selected product(s).

Design Review and Deployment

Inviso will present both a proposed Design and Deployment Plan.

This may include additional demos and roadmaps.

Deployments and Adoption Plan

Once the deployment is complete, Inviso will produce an Adoption Plan which documents the organization's desired end state of the deployment of the selected product(s) up to the EA Renewal timing.

Health Check

Health Check meetings on a defined cadence to confirm that adoption is continuing to take place as per the Adoption Plan, the impact to the organization's Secure Score, and ask about stories of success (i.e., how a product solved a previous issue).

4 to 8 Weeks

What makes this project unique? It allows for you to help your organization adopt technologies that are included within your subscription — essentially turning on products and features that you already own. Once Inviso supports your deployment of the product, this program has a built-in Health Check feature, so that as questions arise over the months following the deployment.

Applications, Infrastructure, and Security

- Datacenter Migration
- Application Migration
- Governance & Cost Optimization
- Azure Arc
- Microsoft Sentinel
- Microsoft Defender for Cloud

Kickstarting the Adoption

Requirements Gathering

Gather information about the organization's business objectives.

Agree on pilot project objective and timeline.

Project Kick off

Review project key milestones and timelines with project stakeholders.

Set expectations around status communications and definitions of success.

Provision Azure Landing Zone

Deploy Production-Ready Landing Zone underpinned with appropriate ADS services.

Customer scenarios addressed may include Azure, SQL, ADF, Synapse, Fabric, Power BI, etc.

Develop and Deploy Pilot

Implementation of modern analytics pilot solution as defined during requirements gathering process.

Pilot demo and rollout to selected participants.

Documentation and Production Deployment Planning

Technical documentation to accompany pilot project in addition to documentation of general governance and administration of best practices.

Interactive workshops for both technical users and administrators.

4 to 8 Weeks

What makes this project unique? It allows for you to help your organization adopt technologies that are included within your subscription — essentially turning on products and features that you already own. After Inviso deploys your pilot, this program includes documentation and training workshops addressing technical, governance, and administration best practices.
