SENTINEL

SENTINEL SERVICES JUMPSTART
MICROSOFT AZURE FILE SHARES

Azure file shares are used as serverless file shares. Azure Files can completely replace or supplement traditional on-premises file servers or network-attached storage devices. With Azure file shares and AD DS authentication, you can migrate data to Azure Files. Azure Files makes it easy to "lift and shift" applications that expect a file share to store application or user data to the cloud.

You can use Azure Files as storage for backups or for disaster recovery to improve business continuity. Data that's stored on Azure file shares isn't affected by disasters that might affect on-premises locations. With Azure File Sync, Azure file shares can replicate to Windows Server, either on-premises or in the cloud. This replication improves performance and distributes caching of data to where it's being used.

Scope of Work Details

## Discover and Design: Four (4) Hour POC Definition Workshop

- *Define business outcomes, analyze current environment, and design customer blueprint for Azure File System*
- *Analyze current Active Directory and Application(s), Cloud Discovery*
- *Review Microsoft licensing requirements*
- *Review security requirements*

Deploy / Implement:

- *Sentinel to configure (4) Azure File Share*
- *Sentinel to provide storage migration from existing CIFS share for up to (1TB) of file data*
- *Can also be used with DFS Namespace servers for HA (not provided by this service offering)*

Demonstration:

- *Sentinel to validate and demonstrate Microsoft Azure File Share*
- *Sentinel to provide high level overview for administration and maintaining Azure File Share*

$9,720 for services and Project Management (Additional costs for licensing/ devices)

Note: Customer acknowledges that Sentinel will seek Claiming Partner of Record (CPOR) association to our Microsoft Customer Tenant ID under the Microsoft Partner Incentives Program.

DOES NOT include third party backup integration

DOES NOT include remediation of any existing configuration issues or compatibility requirements
