

Unlock Cloud Potential:

Waterstons Cloud Assurance service maximizes your investment in cloud technologies.

Waterstons holds a strong partnership with Microsoft across Australia and UK.

Helping our clients with by delivering quality consulting and managed service solutions.

Headquartered in Sydney, we offer end-to-end services in Cyber Security, Tech Consulting, Managed Services, Data & Analytics.

We are Gold Accredited partners across Microsoft Cloud, Security and Workplace products and take a security first approach to our services and consulting.

What We Do:

Our 2-day Azure Cloud Assurance Review is designed with a dual focus on cost optimisation and a high-level review of your cloud governance within the Azure environment.

In the scope of cost optimisation, we leverage Azure Cost Management and Azure Advisor to identify potential areas for cost reductions. We review your Azure resources to ascertain their suitability for your needs, pinpointing underused or unused resources, and suggesting their removal with Azure Resource Manager to prevent wastage.

We assess your auto-scaling strategy via Azure Autoscale, ensuring you only pay for the resources you need. Furthermore, we evaluate your data transfer costs with an eye towards optimising cross-region or outbound data transfers.

Lastly, we consider your commitments to Azure Reservations or Savings Plans, as long-term commitments often come with attractive discounts, leading to potential long-term savings.

Simultaneously, we conduct a high-level governance review using Azure Policy and the Microsoft published Governance and Well Architected Frameworks assessments. This includes evaluating your tagging practices, naming conventions with Microsoft's best practice recommendations, and scrutinising your role-based access control (RBAC) hierarchy via Azure Active Directory, which are vital for maintaining order and establishing effective controls in your cloud infrastructure.

Additionally, we ensure a robust security posture by leveraging Azure Defender for Cloud trial where possible to identify potential threats and vulnerabilities.

Our primary aim extends beyond merely identifying potential savings; we strive to equip you with a greater understanding of your Azure cloud resources, empowering you to exercise enhanced control. This comprehensive review provides a foundation for potential project work, setting the stage for us to delve into greater detail based on the issues identified during this initial engagement.

Prices may vary based on engagement complexity.

We look forward to hearing from you soon.
