Workshop: Find Hidden Data Treasures in Your Company with GPT-4

In this workshop, you will learn how to use GPT-4, an advanced AI model from OpenAI, to find hidden data treasures in your company. We will use Azure OpenAI Service to build a model that can identify and extract valuable information from large datasets.

In a world where data sets are constantly growing and continuous data flows are being added, our ability to understand and interact with this data is becoming increasingly important.

Recent advances in artificial intelligence have enabled people to interact with new AI technologies in a human way. Many have tried ChatGPT and found useful applications for quick and helpful answers. But how can organizations truly leverage the power of such tools?

Target Audience
This workshop is aimed at people who work with data management and analysis within companies. You do not need any prior experience with AI or machine learning to participate.

Practical Information
The workshop will be held online and last approximately 2 hours. You will need a computer with an internet connection to participate. No software needs to be installed on your computer.

Content
The workshop will cover the following topics:

- Introduction to GPT-4 and its features

- How to use Azure OpenAI Service to build a model that can identify hidden data treasures

- Practical examples of how to use GPT-4 to find valuable information in large datasets

- Looking on the next evolution with AI Agents and Azure Autogen technology to find even more hidden stuff!
