

# AZURE SITE RECOVERY

**Are you currently in Azure or planning to move there?**

**Are you wondering how to design and implement an Azure Site Recovery solution?**

All Covered can evaluate your applications and infrastructure to provide a recommendation on how to protect your data and systems in Azure.

Azure Site Recovery (ASR) is Microsoft's disaster recovery solution for server workloads running on-premises or in the cloud. The trick is to design and implement the solution accurately and correctly from the start.

We will collaborate with you to develop an Azure Site Recovery solution to ensure minimized downtime and easy implementation, all while promoting Microsoft best practices for Azure.

## **LET THE ALL COVERED CLOUD EXPERTS HELP PLAN YOUR AZURE SITE RECOVERY SOLUTION**

Azure expertise with Microsoft consulting in the background. Let All Covered act as a single point of contact for design and implementation of your Azure environment or ASR solution.

Leverage the complete functionality of ASR. When configured properly, ASR can replicate your data and VM images to a secondary Azure region. In the event of a disaster in the primary Azure region, a proper design will automatically spin up your VMs in a secondary data center, in the order you specify and route user traffic to the secondary server workloads.

Add services from All Covered to your Azure solution. Bundle additional Cybersecurity, UTM and monitoring services to your account.

Control your environment. Work with a partner that understands Azure best practices and can help maximize the benefits of your ASR solution.

### **PROVEN EXPERTISE AND A PARTNER YOU CAN TRUST**

Since 1997, All Covered has been a trusted partner to thousands of organizations across the country. Through our true technology partner approach and Microsoft Cloud Solutions Provider partnership, we help simplify the planning, maintenance and oversight of your Azure infrastructure, cybersecurity and compliance needs.
