VERSION 1
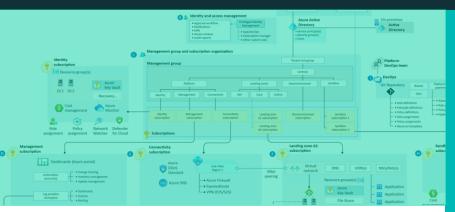

AI Enabled Azure Landing Zone – Design and Delivery

AI Enabled Azure Landing Zone

A bespoke design and fully automated delivery of a Microsoft Cloud Adoption Framework aligned, AI Enabled Azure Landing Zone – designed and delivered by an Azure Expert MSP and Global Microsoft Partner of the Year for Modernising Applications 2023.

Version 1's AI Enabled Azure Landing Zone provides you with a best practice aligned platform to migrate workloads and develop new applications within a well governed, secure, resilient, and scalable Azure environment. With this new feature, you can now deploy AI-based Azure resources quickly and consistently according to best practice within a well-structured environment, making it easier to build intelligent applications that leverage the power of AI in Azure.

A good Azure Landing Zone needs to accommodate application migration, modernisation, and innovation at scale, and should provide networking, identity, governance, and security of Azure subscriptions out of the box. One size does not fit all however, and Landing Zone designs are often customised to meet a customer's needs. Furthermore, automation is at the heart of Landing Zones, and authoring templates and pipelines can become cumbersome, particularly if a true DevOps methodology isn't followed.

The Version 1 Azure Landing Zone solves these problems.

Our Azure Landing Zone designs adopt a collaborative approach through design workshops – the output of which is a bespoke Low-Level Design (LLD). Every design will strongly align with the Microsoft CAF and NCSC Cloud Security Principals.

Data, AI and App Innovation are core components of our AI Enabled Azure Landing Zone, and you'll work closely with one of our certified experts to create a design tailored to our requirements.

Each design can be deployed using our extensible deployment accelerator, which enables our customers to leverage DevOps practices and processes quickly and easily through minimal effort.

Highlights

- A collaboratively designed Azure Landing Zone

- Deploy AI-based Azure resources quickly and consistently

- Fully automated DevOps deployment

- Aligned to the Microsoft Cloud Adoption Framework (CAF)

- Delivered by an Azure Expert MSP and Global Microsoft Partner of the Year for Modernising Applications 2023
