50%+

performance issues are
caused by errors in the
database code

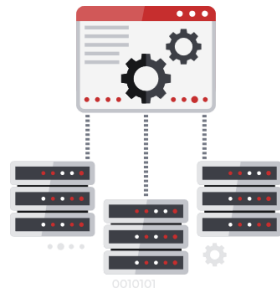

Our Vision

- We are on a mission to help millions of app developers in the world save time and money in finding potential software update problems before they occur.
- We want to do that through our patented use-case database monitoring tool that traces SQL queries to application code and our 75+ years experience in software development.

The Problem We're Solving

Database inefficiencies are a massive source of unplanned costs and time wasted.

50%

of performance issues in new app releases are caused by errors or inefficiencies in the code of the database.

€100k-300k

Cost of the problem for financial services and healthcare companies in the release of new business critical software every year.

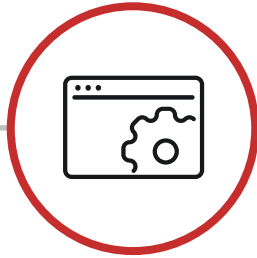

2000 Hours

Lost every year by the average financial services and healthcare company to fix inefficiencies in the database code.

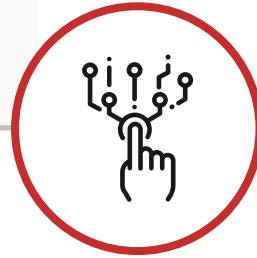

Our Solution – Devaten Tool

Powerful observability and monitoring tool which gives insights and solutions to resolve database inefficiencies.

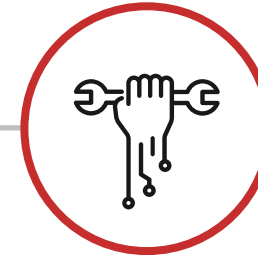

Detect

By tracing SQL queries to application code, we find potential problems with new app releases before they happen, thus saving app developers time and money.

Recommend

We automatically monitor relevant use cases in real time during software development, with easy integrations and recommend actions to fix issues.

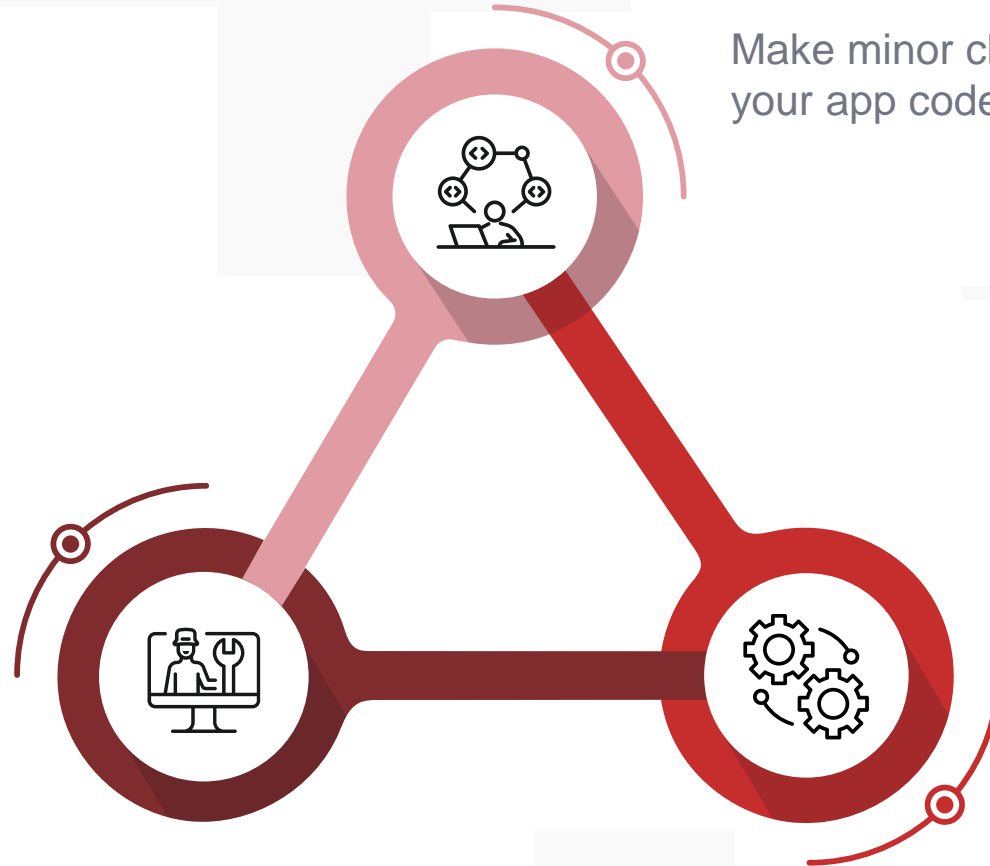

Optimise

Our tool matched with a powerful alerting system and performance diagnostics helps you avoid up to 70% of problems in your new or updated app.

How it Works

Recommendation

Get expert advice to fix your problem

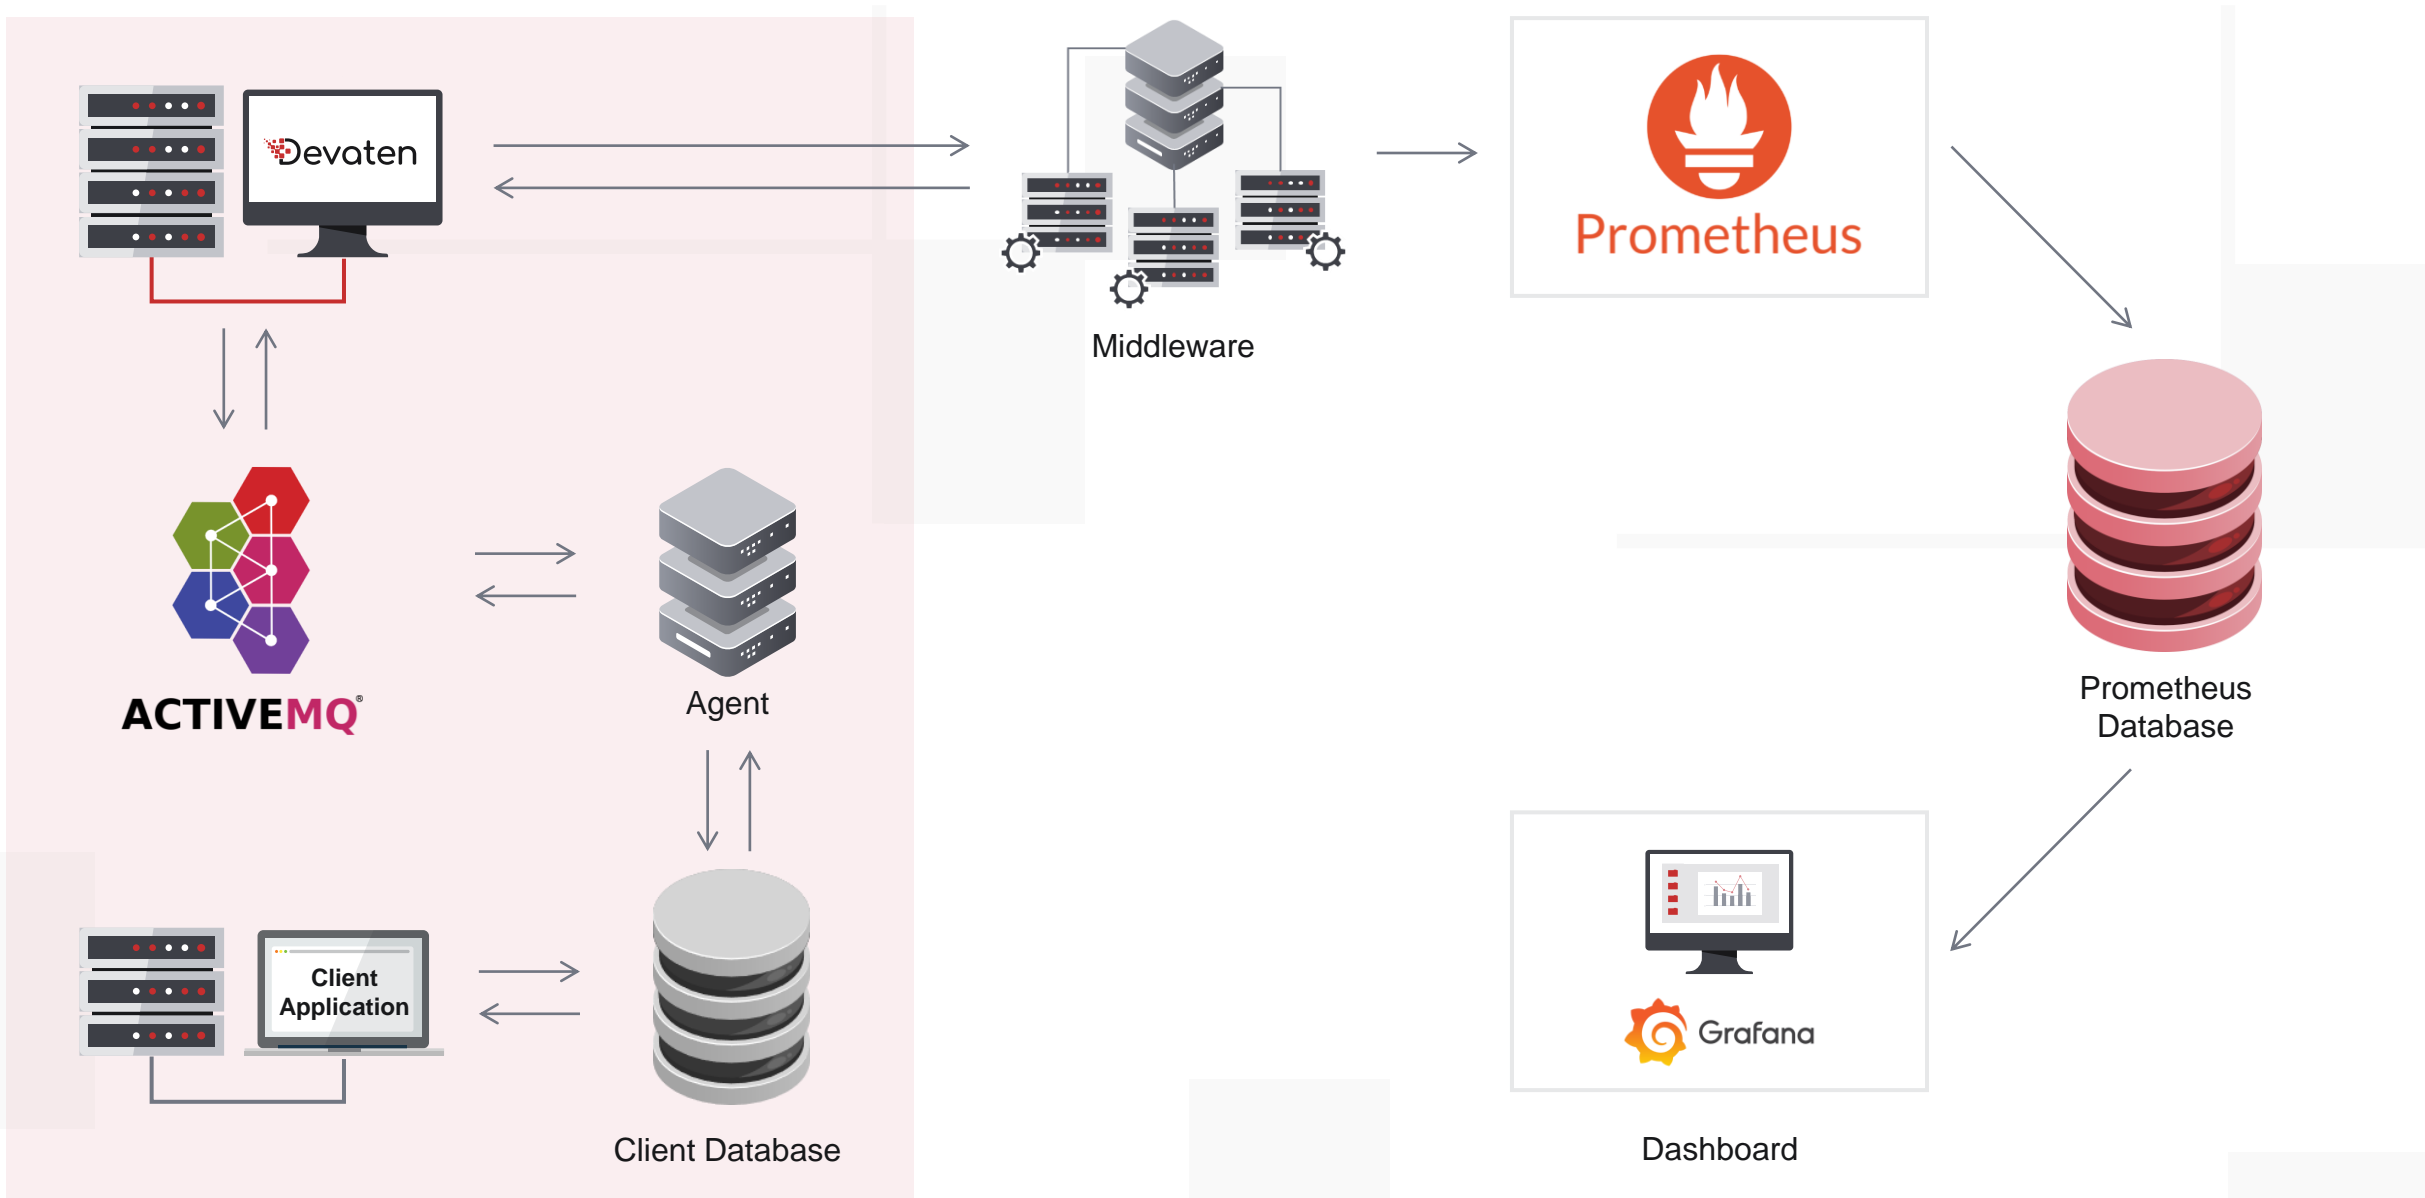

Instrumenting

Make minor changes to your app code

Integration

Integration with visualization tools using REST API

Groundbreaking SaaS Solution for App Developers to Monitor Database Performance and Avoid Time-Consuming Corrections
