Why Rivery?

Connect to any data source

200+ native data connectors right out-of-the-box or custom connectors for any data source with Rivery's custom API and webhook capabilities.

Powerful orchestration engine

Automate and orchestrate complex data workflows from start to finish with advanced logic, branching, conditional logic and more.

Robust transformation layer

Perform SQL-based transformations in-database, using looping, conditional logic, and support for building dependencies. Leverage Python integration for code-based transformations.

API and command-line interface

Remotely execute, edit, deploy, and manage data pipelines via CLI and convert data pipelines into infrastructure as code (IaC).

Data activation

Push data from your cloud data warehouse into third-party apps with reverse ETL.

Native Python support

Run your own Python scripts in the cloud as native data pipeline steps with zero effort. Perfect for machine learning, connecting to unique sources, plus advanced transformations.

Instant starter kits

Launch workflows with complete data models in a click - including pre-defined business logic.

Fully-managed SaaS

Deploy new pipelines in minutes and automatically scale to handle any load, while only paying for what you use. Save time and money with no need to set up or maintain your own infrastructure, with security and reliability built in.

*It now takes our BI team **a fifth of the time** to generate reports our teams need in order to make the most crucial business decisions.*

David Piazza
Data & BI Analyst

Sweet inn

*Rivery's **out of the box starter kits** are amazing. It helped us build our initial data pipelines really fast and meet our initiatives objectives right out of the gate.*
