AIS Service Catalog

BUILT FOR ⊞ Microsoft Azure

Accelerate Your Journey to Scaled Enterprise Cloud DevOps

| DevTest | Automation | Self-Service | Full Lifecycle DevOps | Scaled Enterprise DevOps |

At Applied Information Sciences (AIS), we are committed to leveraging innovative technologies that enable transformative change for our customers within their organizations and industries.

After years of guiding enterprises and government agencies through their journey to Enterprise Cloud DevOps, AIS created the Service Catalog for Microsoft Azure. Configured with Microsoft Azure Resource Manager (ARM), provision and configure your enterprise-approved Azure resources in a self-service portal.

Jumpstart your DevOps journey today!

Key Benefits

Meet time-to-market demands by quickly provisioning Azure resources in a self-service marketplace
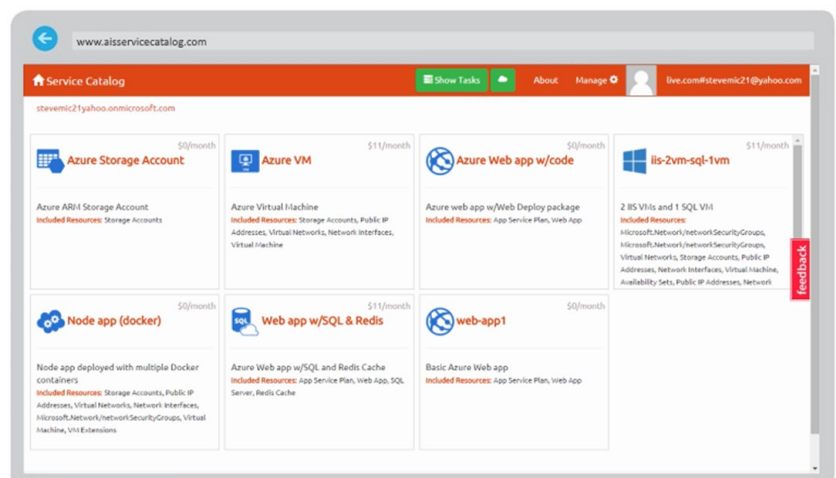

Enforce IT policies by limiting choices to enterprise-approved resources

Manage security with Azure Active Directory

Reduce costs through consistent monitoring and reporting of provisioned cloud resources

No product lock-in *all your information is stored in your subscription using non-proprietary formats*

Centralized repository *for enterprise-wide blueprints for common, approved & reusable products*

Are your Development Teams creating their own "shadow IT" cloud environments?

Development Teams must meet aggressive time-to-market pressures from business units. As a result, they want to quickly provision cloud resources in a self-service model. However, IT Operations must not only manage who can provision cloud resources, but also limit choices to enterprise-approved technologies. How can IT enforce corporate governance while promoting cloud adoption?

> *"IT must determine how to enable business units while enforcing corporate governance to promote responsible [cloud] adoption."*
> *Mark Russinovich, Azure CTO* [1]

*Provision from a marketplace of Enterprise-approved products*

Provision enterprise-approved Azure resources in a secure, self-service portal

AIS Service Catalog is a Software-as-a-Service (SaaS) provisioning portal for Azure cloud resources **without requiring privileged access to the Azure subscription**. Provisioning permissions are managed with your enterprise Azure Active Directory. A 'product catalog' of your enterprise-approved Azure resources is created with Azure Resource Manager (ARM) templates. However, there is no product lock-in - you retain ownership of these ARM templates and any provisioned Azure resources even if you no longer use Service Catalog.

Enforce IT Policies in the Product Catalog

Enforce your enterprise's IT policies in the product definitions. Jumpstart the product definition with the included drag-and-drop designer, or leverage over 250 open-source ARM templates publically available in Github. Products can be as simple as a single resource, or as complicated as a multiple resource production environment for a development team.

Accelerate the Definition of your Product Catalog

Gain insights into your Azure cloud usage and spend

Logically group provisioned resources in assigned Subscriptions and Resource Groups. Through the use of ARM Policies, Service Catalog enforces consistent tagging of Azure resources at provisioning, allowing for effective monitoring through a variety of tools including Enterprise Azure Portal and Microsoft PowerBI.

Manage Azure Spend and Chargeback

Get Started in Minutes

As a SaaS offering, there are minimal onboarding costs as no installation is required. Simply enroll one or more Azure subscriptions, define your enterprise's product catalog, and begin provisioning right away. Get started now!

AIS Service Catalog *Private Preview:*

AIS Service Catalog is currently available as a *Private Preview*. We are seeking prospective enterprises to use the product, for **FREE**, in exchange for feedback on the current features and future roadmap items.

There is minimal risk involved. Any product definitions (ARM templates and policies) and provisioned Azure resources are retained by the customer, even if Service Catalog is no longer used.

Try it today!
