SENTINEL SERVICES JUMPSTART

MICROSOFT DEFENDER FOR CLOUD APPS

Microsoft Defender for Cloud Apps address security gaps in an organization's use of cloud services by providing granular visibility into and control over user activities and sensitive data. Cloud Access Security Broker (CASB) coverage scope applies broadly across SaaS, PaaS, and IaaS. For SaaS coverage, CASBs commonly work with the most popular content collaboration platforms (CCP), CRM systems, HR systems, Enterprise resource planning (ERP) solutions, service desks, office productivity suites, and enterprise social networking sites. For IaaS and PaaS coverage, several CASBs govern the API-based usage of popular cloud service providers (CSP) and extend visibility and governance to applications running in these clouds.
