Dell Cloud Database Implementation with Analytics for Microsoft Azure

AI/ML is grabbing attention today for the value it provides generating insights derived from vast volumes of data, key to gaining competitive advantage. Barriers to effectively leveraging AI/ML include security concerns, complexity of integration, managing data volumes and lack of technical knowledge.

This service is designed to accelerate customer success in extending their existing Power BI reporting capabilities to include the use of Microsoft Azure ML and Cosmos DB. Acceleration is achieved both by providing deep subject matter expertise from Dell and through pairing opportunities for customer team members to learn the necessary skills, practices, and tools on-the-job. Together, the joint Dell and Customer team will set up Cosmos DB, integrate Power BI with Cosmos DB and Azure ML, build Power BI reports using Cosmos DB data and use Power BI to create/consume Azure ML model.

Our team of experts will help you deliver the outcomes your business needs:

- Improved data performance and scaling options
- Improved speed of data insights
- Near real-time dashboards
- Reduced complexity of managing ETL pipelines
