

Architecture Engineering Services for Microsoft Sentinel

SERVICES:

Microsoft Security Adoption & Advisory Service

Sentinel Architecture & Engineering Services

Sentinel Data Source & Connector Review Services

Sentinel Report & Workbook Implementation Services

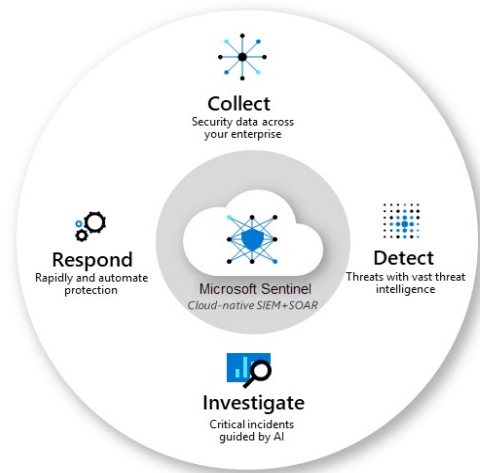

Sentinel Analytics Rule Implementation Services

Sentinel Playbook & Connector Implementation Services

Periodic Architecture & Solution Health Reviews

Microsoft Sentinel delivers intelligent security analytics and threat intelligence across your entire enterprise. With Sentinel, you get a single solution for attack detection, threat visibility, proactive hunting and threat response.

1. Collect data at cloud scale across all users, devices, applications and infrastructure, both on-premises and in multiple clouds.
2. Detect previously unseen threats and minimize false positives using Microsoft's analytics and threat intelligence.
3. Investigate threats with artificial intelligence, and hunt for suspicious activities at scale, tapping into years of cyber security work at Microsoft.
4. Respond to incidents rapidly with built-in orchestration and automation of common tasks.

Cyderes has identified a growing need for Microsoft Sentinel SIEM and SOAR experience and has developed Microsoft Sentinel advisory services to help our clients architect and execute appropriate Sentinel implementations for their environments. Our goal is to identify the specific needs of the individual client and build a customized roadmap that walks them through their Microsoft Sentinel journey.

Key Features:

- Review of data sources and data connectors
- Creation of reports and workbooks
- Build analytic rules to create actionable incidents from detected alerts and periodically review for gaps and new threats
- Build playbooks to automate and orchestrate common tasks and responses within the defined environment including implementation of connectors that may be required for these
