

Resistance is futile - your PC will be assimilated

Peer-to-peer deployment is here to stay

OSD Toolkit

We made this software 'FREE' in order to strengthen the community that helped build us

A faster and more reliable way to mass deploy

By enabling peer-to-peer in a resource intensive process like Operating System Deployment (OSD), more systems on the network will share the load. This ensures a fast and effortless deployment without hogging system resources from other computers or the network.

This kit has been developed in order to streamline deployments from **Windows Intune**, **Microsoft Deployment Toolkit (MDT)** as well as **Microsoft System Center Configuration Manager**.

No agent other than Microsoft's native peer-2-peer agents are required on the client computers. If there is no computer with cached content, the content will be downloaded from the server and retained throughout the process. The toolkit works with both distributed and hosted cache mode and is easy to integrate into your existing deployment method. We can work with any deployment solution out there that uses HTTP/BITS/DO as the main delivery engine. And you know what, unlike most other solutions of this type out there, this baby is free.

Reduce time

As content comes from peers, it will always be local and fast. No more "melon through a hose" scenarios.

Resistance is futile

Peer-to-peer is the future, start using it and see the benefits it will bring to your network today.

No constraints

Don't flood the WAN or hog servers with downloads that peers can cache for you. Basically do more with less.

Spend money elsewhere

As it's free, spend your budget on something more interesting than replacing what you already have that works well.

Features

Build fast from USB - use the OSD Toolkit with fast USB keys and BranchCache

Uses Microsoft P2P tech - add Microsoft P2P components to your WinPE image using our simple command line tool and you're done

Easy integration - just integrate with your current task sequence method

Standard version is free - for the full 'Turbo' experience we have a paid license option

Business benefits

- ✓ Free! Zero license cost – spend your money on other things
- ✓ Optional Support – pay if you like it. This gives you more features that is only available to paying customers
- ✓ Faster Deployment Times – since you are using peer-to-peer things will go faster
- ✓ Implement in minutes – update the boot media and few task sequence steps. That's it, no infrastructure changes required
- ✓ Works with most deployment systems – even the new PSD

Who we are

2Pint – like the fun uncle or aunt that sometimes came to visit. Somewhat nerdy, super practical, painfully honest, notoriously hardworking though. Independent, not because we don't want to be social, but merely because we want to have the right to say what we think and do what we know is right.

What we do

2Pint Software was formed in 2014 by us, Andreas and Phil. We produce software to help organizations build better infrastructures. We are the world's experts in peering of content, network observability, OS build and health tracking for both Windows and Linux.
