

Would you like to test Microsoft Teams and telephony easily and cost-effectively without first providing your own infrastructure? Then you've come to the right place: We have set up a carrier infrastructure to which we can connect your SIP trunk or provide you with a new SIP connection with dedicated phone numbers. In addition to your SIP trunk, you only pay the monthly Microsoft Phone System license including our services per user who has a phone number.

For the SIP channels you order, you also only pay a monthly service fee - if necessary, the costs for a new SIP connection are added. When it comes to billing, you take no financial risk, because our SIP trunk phone contracts are backed by flat rates. With our service, we not only provide you with the infrastructure quickly and easily via our carrier infrastructure, we also operate and monitor it for you. The change of telephone numbers, the assignment of new numbers or the adjustment of capacities can be handled conveniently via our ticket system or our hotline. This solution does not include the connection of analog terminals such as fax.
