

# TRAINING FOR DEVELOPERS

## MAXIMIZING GITHUB'S POTENTIAL

DexMach offers comprehensive training for developers who utilize GitHub coding services. Our interactive training not only showcase the rich features of GitHub but also empower participants with a clear understanding of how to leverage them effectively. This training helps organizations make informed decisions between about GitHub. We cover the basic principles of DevOps, and offer a deep dive into GitHub, including code management, CI/CD, security with code scanning, Dependabot, and secret scanning. We also provide training on GitHub APIs, such as GitHub API and GitHub GraphQL API, for developers wanting to integrate with GitHub.

Learn DevOps principles, including continuous integration, testing, and deployment pipelines. Our training covers GitHub essentials, from code management to security practices. Dive into advanced features like GitHub Actions and workflows. For developers integrating with GitHub, we offer training on the powerful GitHub GraphQL API. Discover how to programmatically interact with repositories, automate tasks, and build custom tools.
