

Top Reasons to Choose dbForge Studio for MySQL

Your integrated toolset for everything MySQL
that helps achieve more with less effort

What do you get with dbForge Studio for MySQL?

Context-sensitive code completion,
smart formatting and refactoring

Automated debugging capabilities
with step-by-step execution

Comparison and synchronization
of MySQL schemas and table data

Failsafe backup and recovery
of MySQL databases

200+ smart generators
of realistic test data

All you may need
to develop and manage
MySQL databases
in a single IDE

Visual query building
on diagrams without coding

Query optimizer that eliminates
performance bottlenecks

Data import and export
with 10+ supported formats

Data analysis and reporting tools
with charts and pivot tables

Full database documentation
generated with just a few clicks

What else is there in the box for you?

One IDE for all tasks

You don't have to get and set up multiple apps; dbForge Studio is a single solution where every tool is always at hand. And it was designed to cover nearly any task related to MySQL databases.

Free 30-day trial

You have a month of free use to see how well the Studio tackles your tasks. Then you will be able to compare the editions it comes in—and pick the one that best suits your needs and budget.

Fast learning

Effective work with the Studio can be started from day one. The UI is so intuitive that you already know how to use it; and it actually won't take long to master the in-depth features.

Extensive help

You can always consult our comprehensive product documentation, video tutorials, and educational articles on our blog. And if you still have questions afterwards, just contact our support service.

Regular updates

dbForge is all about continuous evolution; our regular updates add new features, enhance the existing ones, and keep our products always polished and relevant for you.

Bonuses for enterprise clients

A special mention should be made of our enterprise clients, who receive product demos, special offers, bulk discounts, and overall assistance with installing and setting up dbForge tools effortlessly.

Awards

Users love dbForge Studio, and it's their appreciation that helps it earn awards on top software reviewing platforms.

Fortune 500 customers

dbForge Studio is favored by leading companies around the world.

Top features that make dbForge Studio invaluable

MySQL Debugger

dbForge Studio saves your time and effort with a mighty Debugger, which lets you investigate the run-time behavior of your database objects and locate logic errors in your code; its functionality includes step-by-step execution, call stack browsing, breakpoints, and watches.

Query Builder

Query Builder is an invaluable tool that helps you generate MySQL queries of any complexity on a visual diagram without any coding. You can build, group, and arrange complex tables, create JOINS, as well as add and update conditions using an intuitive drag-and-drop interface.

Query Profiler

Query Profiler generates profiling results that help you analyze and maximize query performance in MySQL and MariaDB databases. This tool helps you collect detailed statistics about executed queries, find and force slow queries, and troubleshoot performance issues easily.

"We have optimized indexing, INSERTs, and overall processing times several hundred fold since using dbForge Studio for MySQL. What's more, now we process new government data sets within 24 hours of receiving it, as opposed to the week-long process it used to take."

Nicholas Newsad, Director at HealthCare Appraisers

Top features that make dbForge Studio invaluable

Database Comparison & Synchronization

dbForge Studio offers the easiest way to compare and synchronize MySQL databases. For both data and database schemas, you can easily manage comparison results, compare the DDL of two selected objects, generate and preview synchronization scripts, and build reports to keep track of changes.

SQL Autocompletion & Formatting

You can code less yet become much more productive with the built-in IntelliSense-style code autocompletion, smart refactoring, alias management, code highlighting, and instant syntax check. These tools were designed to make your routine coding several times faster.

Flexible Data Import & Export

You can easily perform wizard-aided import and export operations with your data under highly customizable settings. dbForge Studio supports multiple formats for import and export, including plain text, XLS, XLSX, XML, CSV, RTF, PDF, SQL, JSON, and Google Sheets.

"Working with raw data finally became super easy. Database design, import, export, and comparison of data is something that helps a lot in the daily life of a database administrator, and I got all that in a single tool. dbForge Studio is — for me — the best MySQL client on this planet!"

Michael Bladowski, CEO & Developer at MACROPAGE

Top features that make dbForge Studio invaluable

Connection to Multiple Servers

With so many features of dbForge Studio to choose from, we could not leave connection to multiple servers unmentioned here. The Studio is generally known for its broad compatibility options.

Advanced User Management

Besides developer's tools, the Studio provides everything for effective database administration. You can effortlessly manage accounts, set up permissions, monitor open sessions and their activity.

Backup Wizard & Scheduled Backups

The customizable backup and restore functionality of the Studio works both with database schemas and data. All operations can be easily scheduled and automated from the command line.

"dbForge Studio for MySQL has been the most effective database tool supporting the design, architecture, development, administration and debugging of our next-gen CRM system. There is nothing else like it on the market. I do think it is hands down the best IDE for MySQL. It's a fantastic tool."

David Allen, Director of Development at Empower, LLC

What do customers think about dbForge Studio?

The value you get with the Studio can be perfectly illustrated with the excerpts from the success stories and reviews kindly provided by our customers.

“

"Why did we choose dbForge tools for our MySQL management? First, they provided us with easy schema and data comparison and synchronization. Second, simplified support + bugfixing. Finally, automation of our operations."

Stefan Waldbeck

Head of System Administration
at CASHPOINT Solutions
