

Azure Data Advisory

4 week assessment

entelect

Reshape your organisation with prescriptive analytics

Microsoft Azure presents a substantial breadth of data technologies and tools on which to combine and leverage your data.

Making sense of the cloud offerings within this growing tool set can be challenging as it requires experience architecting and migrating data solutions on the platform, as well as constant awareness of new or changing services within the Azure eco-system.

Gold Data Analytics

4 week Assessment

Entelect will help you understand the opportunities, costs and options available.

Whether migrating, building or exploring Azure as your data platform, we will help you make sense of the choices to elevate your business with your data.

Week 1
Context and analysis

- As-is data mapping for existing data platforms and enterprise data architecture
- Technology skills and preferences review
- Strategic context gathering and business context
- Azure data platform tooling demonstrations and explanations

Week 2
Data maturity evaluation

- Analytics Maturity Assessments
- To-be data mapping
- High value use-case identification
- Data delivery process

Week 3
Proof of concept

- Azure tooling understanding and setup
- Rapid prototyping or proof of concept
- Interactive demonstrations

Week 4
Outcomes

- Summary and reporting
- Review and present
- Advanced analytics roadmap

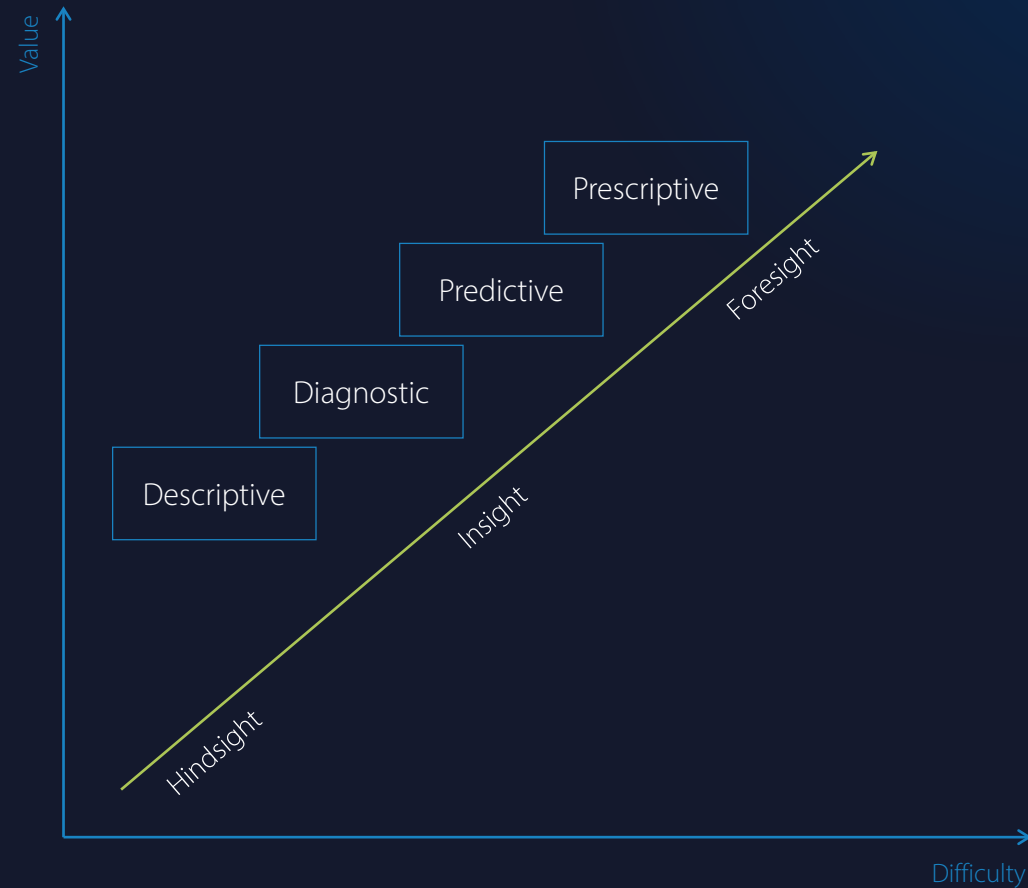

Make sense of the cloud technology choices in the market. Receive tailored and contextual advice on the right tools, technologies and services for business outcomes.
