

According to industry experts, the healthcare data storage market is expected to reach more than \$8 billion by 2026, growing at an average rate of 16.4% every year. This rapid expansion of data is already creating new challenges for many healthcare organizations as they attempt to keep this data secure and meet strict regulatory requirements.

Sentinel's Healthcare Storage Workshop guides your organization through narratives focused on primary storage, image storage, backups, durability, as well as protection from ransomware and other threats. Led by an expert from Sentinel's Healthcare Innovations Team, this complimentary workshop can help you determine future investments in premise and cloud storage, along with how to align it with regulatory requirements in states where your organization provides care.

Areas of Focus

- Overall storage inventory
- Current retention standards
- Regulatory requirements and standards
- Primary storage
- Image data, modalities, retention, protection, and performance
- Data sharing B2B and C2B
- Data protection and archive
- Durability, protection from ransomware, and recoverability

Agenda

The agenda for Sentinel's Healthcare Storage Workshop includes the sections below, however it can easily be altered to meet your specific needs or focus on any areas of particular interest. A report will be provided following the workshop that includes results, a gap analysis, and recommended next steps for your organization.

- Introductions
- High-level Inventory
- Retention policies incl sunset systems
- Primary storage
- Image and modalities
- Cybersecurity risk, protection, and recoverability for each of the areas above
- *Optional B2B and C2B data sharing (may require additional review)
