

## Azure Security Engineering

Our team of certified Azure Security Engineers can provide you with support on many security aspects while migrating or extending your workload on Azure. NVISO matured experience collaborating with customers from different industrial pillars as well as in public administration, adapting support and deliverables to the size and ambitions of each organization.

Either you need configuration from scratch, reconfiguration or migration of existing instances, we have defined procedures to support you in the safest and most efficient way.

We can also support you in defining your cloud governance and implement it via Landing Zones, Azure Policies and IaC Templates; lastly we can provide to your team security training based on your needs and goals.

Azure  
Security

Entra ID

Sentinel

Defender  
for Cloud

## Are you looking into:

Security support for  
your on-prem to cloud  
migration

Security support in your  
cloud-to-cloud  
migration

Design and deploy new  
security solutions on  
the cloud

A subject matter expert  
that can ensure best  
secure configuration

Automating security  
controls with policies  
and IaC templates

## How we can help you

### Azure Security Compliance

Translation of your governance into cloud policies using Azure Policy and CSPM tools.

### Azure Secure Design

Full design or review of existing design of cloud security solutions.

### Azure Secure Implementation

Full implementation planning, including test phase and dedicated workshops.

### Azure Security Automation

Automation of deployment and controls using Azure Bicep or Terraform IaC templates.

### Cloud Security Training

Delivery of customized training focused on Microsoft and Azure security.
