DEXTRIS StreamCast

StreamCast – Introduction

DEXTRIS

StreamCast allows service providers to launch a multi-device video streaming service featuring live streaming, video-on-demand (VOD), content delivery network (CDN), digital rights management (DRM), and monetization capabilities.

StreamCast provides all the necessary features to build and expand a superior streaming platform, comprising video hosting, streaming, integrated billing and analytics, as well as end-user support.

StreamCast team is dedicated to provide a top-notch customer support for the initial setup or maximizing the potential of the platform, we're always prepared and eager to Support.

StreamCast - Other Highlights

DEXTRIS

Show Ads seamlessly transitioning between video display based on user interaction.

Ads Campaign

Limit content accessibility in premium videos and then make use of the paywall feature through an OTT app builder.

Paywall Integration

Allow your users to pick up where they left off with their video viewing so they can continue to have an engaging experience.

Resume Watching

Allow your users to download and watch their videos in even if they don't have internet access.

Offline Viewing

Utilize PWA technology to reach users of native and web applications. User engagement is smartly delivered by the YouCast OTT video solution.

Progressive Web App

Remind users about new and exclusive videos and engage them with brief pop-up messages.
