

Microsoft 365 Copilot Adoption and Change Management

Realizing Microsoft 365 Copilot Potential Through Adoption Excellence

Microsoft 365 Copilot promises to augment and boost how organizations and users work everyday. Yet research shows that nearly a third of all AI projects fail to move beyond proof of concepts and pilots into scalable production to drive enterprise-wide AI adoption.

Without addressing workforce readiness, even innovative platforms like Microsoft 365 Copilot risk underutilization - impeding productivity gains and stranding Microsoft 365 Copilot potential instead of enabling AI-driven productivity for everyone.

How can Noventiq address the challenges of AI adoption?

As a Microsoft Adoption & Change Management Advanced Specialization Partner Our PROSCI-aligned methodology strategically guides executives, managers and individual contributors to harness AI's possibilities across initiatives - embedding adoption excellence organization-wide.

Our adoption framework applies research-backed change management methodologies to:

- ***Assess readiness:*** We evaluate existing environments, workflows and organizational change capacity to identify adoption gaps and blockers.
- ***Coordinate execution:*** Cross-functional AI councils steer alignment to strategic goals and provide sponsorship and commitment.
- ***Engage through inspiration:*** We spotlight peer success stories to build awareness and desire.
- ***Instill confidence:*** Highly interactive and customized Microsoft 365 training relevant to user personas and everyday use cases.
- ***Incentivize usage:*** Motivational programs foster a culture of change and boost Microsoft 365 Copilot adoption
- ***Optimize for excellence:*** We analyze usage trends and gather feedback to continuously refine Microsoft 365 Copilot adoption.
