Optimizing for Microsoft 365 Copilot

Navigate Your Microsoft 365 Copilot Implementation With Confidence

Enable your organization with Microsoft Copilot's AI capabilities while mitigating implementation risks. Epiq assesses your readiness for Copilot, identifies any security gaps, and ensures seamless implementation.

Secure permissions and eliminate stale data.
Oversharing can lead AI models to access too much information, including sensitive data, while stale data risks exposing outdated or irrelevant details. Epiq safeguards your data, leveraging a holistic approach that validates your current data management practices and controls, ensuring appropriate use and eliminates unnecessary information.

Optimize with data classification.
An effective data classification sorts and streamlines your data for optimal AI use. By categorizing and discarding irrelevant information, we enhance the efficiency and accuracy of AI models, ensuring quick and precise access to the most relevant data.

Secure with Microsoft Purview Data Loss Prevention (DLP).
DLP capabilities protects your sensitive data, prevents oversharing and exposure; providing a comprehensive view of your data, data security and visibility.

Trust in data encryption.
Safeguard your data with encryption, ensuring data is accessed only by appropriate users. This practice is in alignment with privacy regulations such as HIPPA, GDPR, and CCPA, enhancing data protection and compliance.

Consider the end user.
Make informed decisions on user access to AI capabilities. Aligning Microsoft 365 Copilot with your policies promotes adherence to best practices in information management, data security, and data privacy.

Let's take the next step together

AI Readiness with Epiq

Epiq's Information Governance team offers an accelerated **Microsoft 365 Copilot Readiness Assessment** to prepare your organization for AI solution roll out.

Validate current state data management practices and controls.

Identify and strengthen gaps for a stronger AI foundation.

Develop a tailored AI implementation roadmap.

Support from proof of concept to full AI rollout, including pilot testing, change management, training, and documentation.
