

Microsoft 365 Merger & Acquisition Implementation

Moving users and data securely to their new destination

The Challenge

Merging, acquiring, divesting, or rebranding involves the entire organization, aiming for a smooth and timely transition with minimal business disruption. Securely migrating data and users while meeting compliance standards is crucial.

Organizations facing this challenge often struggle with:

- Tracking shared content and contributors
- Managing external sharing
- Preserving emails, chats, and other communications
- Addressing DLP, Retention, and eDiscovery
- Safeguarding sensitive data during migration
- Ensuring seamless transitions for users across tenants, including internal/external sharing, identity protection, and application functionality amidst identity changes

The Solution

Spyglass's 4-Week Microsoft 365 Merger and Acquisition (M&A) Implementation swiftly migrates data across Microsoft 365/Azure and third-party solutions like Slack, Google, Lotus Notes, Egnyte, Box, Dropbox, and AWS. Security and Compliance guide the handling of all affected data and users, ensuring the destination meets or surpasses necessary controls.

**Price is scoped based on specific needs of the customer ranging from 4 to 6+ weeks of work based on total data size, user counts, solutions in scope, and complexity.*

Spyglass MTG Can Help!

We can help you securely move users and data to a new destination. [Contact us today!](#)

About Spyglass MTG- A Women Owned/Women Led Company

For over 15 years, we've closely partnered with Microsoft to bring their vast and expanding suite of enterprise solutions to clients—from better apps to powerful analytics to cloud flexibility. We can help you enhance, implement, integrate, support and procure your Microsoft products. You'll solve business problems and leverage the platform to increase maximum business productivity and results within your organization.

Deliverables

- Securely migrated data
- Security Gap Assessment
- Relevant Inventories

Key Components

- Data Discovery
- Security Assessment of both source and destination
- Migration of the data to the destination tenant in a staged manner
- Testing and Validation for data and users' information
- Training (End user and Administration) as necessary
