

Driving the Retail Sourcing Process

EV Source is a collection of integrated SaaS modules within the EV Cargo technology stack, extending supply chain visibility and control across Sourcing, Production, and Compliance.

Brief & Quote is part of this collection and is designed to simplify the sourcing process through digitization, allowing retailers to create **Product Briefs**, send **Tenders** to trusted suppliers, and receive **Quotations** in a unified format, with all data maintained in one **central location**.

EV Cargo's **Brief & Quote** module eliminates common sourcing problems such as:

- 🚫 decentralised information & communication
- 🚫 complex offline data management
- 🚫 lack of standard ways of working

Proven to improve efficiencies with a well-documented process history, reduce iterations and quote turnaround times, and review side-by-side price comparisons with our built-in landed costing.

Brief & Quote enables the traceability and review of on-line quotes, with a single-click-view, to support informed buying decisions, including multi-tendering, through one single platform with configuration options to tailor the solution and compliment specific business process needs.

CONTACT US

EV Source modules are designed to **simplify** the sourcing process, increase **collaboration**, improve **visibility**, and **optimize process**.

To understand more about how to rapidly implement our configurable solution, please contact your EV Cargo representative, or contact:
