

Transform your Data Landscape for Tomorrow's Business Needs

Let our experts guide your next steps to cloud analytics with a **comprehensive data estate review** and an introduction to **Microsoft Fabric**.

An optimized data infrastructure can be the difference between business success and stagnation. Our Data Estate Assessment Workshop offers businesses a comprehensive review of their current data landscape, presenting avenues to harness the full potential of their data using Microsoft's cloud solutions.

Current Data Estate Review

Dive deep into your present infrastructure, identify data silos, analytics tools, and challenges.

Modernization strategy

Get insights and strategies for data integration, governance, analytics, and AI readiness.

Microsoft Fabric deep-dive

Discover the power of Microsoft Fabric and its significant impact on leveraging data & AI in driving business success.

Why Microsoft Fabric matters

Microsoft Fabric offers a comprehensive analytics suite, encompassing everything from data movement and lakes to data engineering, integration, data science, real-time insights, and business intelligence.

This unified approach is fortified with top-tier data security, governance, and compliance measures.

Why this workshop matters

Organizations often lack data strategy, data governance and/or data management. This workshop helps your organization with:

- Identify siloed systems and data across your organization
- Identify costly integrations and ongoing maintenance efforts
- Identify analytics limitations
- Accelerate BI adoption and reduce data sharing
- Identify security risks and plan for unified data visibility and governance
