

Modern BI Architecture for Business Apps

To meet your needs, it is necessary to build an environment to make data available to your users via PowerBI in realtime with a rich and clear data model.

Your applications will be connected to the Datalake which will store all the information.

The data will be transferred to a Datawarehouse (Synapse Serverless) allowing either direct access to PowerBI or later the creation of specialized Cubes by theme. (Finance, Inventory, Sales etc...)

Modern Datawarehouse
