

Aximsoft's "Azure Management Services"

Why Aximsoft's "Azure Management Services"?

- ✦ You no longer need to set up, manage, and scale your Azure cloud resources. We ensure the total visibility & control of your dynamic Azure environment.
- ✦ We at aximsoft understand that cloud service monitoring & management forms a vital aspect in delivering value to your customers.

Deliver the stability and scalability needed for a business

Provision systems, services and deployments

Ensure database integrity and security

Provide best practices on Azure cloud management services

24/7 Consistent Support

Cloud Infrastructure Management (CIM)

8 - Weeks Engagement

Experience ongoing management and optimization of your Azure infrastructure with our Cloud Infrastructure Management. This 8-week engagement includes monitoring, security, compliance management, and cost optimization.

Microsoft
Partner

CIM Roadmap

Week 1-2: Setup and Configuration

- Configure monitoring and alerting systems
- Implement security and compliance measures

Week 3-6: Ongoing Management

- Continuous monitoring and incident response
- Regular security and compliance audits

Week 7-8: Optimization and Reporting

- Analyze usage patterns for cost optimization
- Generate regular reports for the client

Microsoft
Partner

Deliverables

- Well-managed and optimized Azure infrastructure
- Regular reports on usage, performance, and security

Cloud and Network Monitoring

Full stack Cloud Resources Monitoring, 24/7

Setting up and monitoring native cloud services

“We Collect and track standard & custom metrics, monitor log files, set alarms and react to changes in your cloud resources in near real-time to keep your application running smoothly”

Cloud Compute Monitoring

- ✦ CPU credit balance
- ✦ CPU utilization
- ✦ Disk IOPS
- ✦ Network statistics

Database Monitoring

- ✦ Read/write IOPS
- ✦ Client connections
- ✦ Burst credit balance
- ✦ Read/write latency

Storage Service Monitoring

- ✦ Bucket size and object count
- ✦ Total request latency
- ✦ Object requests (Get, Put, Delete)
- ✦ Bytes downloaded/uploaded.

Load Balancer Monitoring

- ✦ Unhealthy hosts
- ✦ Surge queue length
- ✦ ELB 4xx and 5xx errors
- ✦ Back-end connection errors.

Server-less Compute Monitoring

- ✦ Invocations
- ✦ Errors
- ✦ Function duration
- ✦ Throttles.

Notification Services Monitoring

- ✦ Number of messages published
- ✦ Number of successful notifications
- ✦ Number of failed notifications
- ✦ Size of data published.
