# CloudTrack Management

Managed Veeam Backup for Azure

# Take control of your data in the cloud

## Managed Veeam Azure Backup

How do you ensure the last line of defense and separation of duties of your resources in Azure?

Accidental data deletion, insufficient focus and knowledge of backup operations, or malicious actions by employees can pose serious risks of data loss in the cloud, where the consequences for the organizations that experience data loss can be business critical and result in extremely high costs.

While Microsoft assumes responsibility for the infrastructure, the shared responsibility model clarifies that it's still your data, and you're responsible for securing and protecting it.

With a Managed Veeam Azure Backup, you are offered a secure automatic and external backup solution to protect resources and data located in Microsoft Azure.

Azure backup services are available 24/7, and we support the customer in critical restore situations, so customers experience a fast and efficient data recovery.

### Procedure - How we begin

- Start-up meeting and Atea are granted Azure rights
- Atea conducts preliminary analyses and plans implementation
- Atea implements based on the customer's wishes
- The service is live
