Why Aximsoft "Azure Management Services"?

✦ You no longer need to set up, manage, and scale your Azure cloud resources. We ensure the total visibility & control of your dynamic Azure environment.

✦ We at aximsoft understand that cloud service monitoring & management forms a vital aspect in delivering value to your customers.

| Deliver the stability and scalability needed for a business | Provision systems, services and deployments | Ensure database integrity and security | Provide best practices on Azure cloud management services | 24/7 Consistent Support |

Microservices Roadmap

Week 1-2: Architecture Design

- Design microservices architecture

- Define APIs and user activity tracing requirements

Week 3-6: Implementation and Integration

- Develop and deploy microservices

- Implement APIs and user activity tracing tools

Week 7-8: Testing and Optimization

- Conduct thorough testing of microservices and APIs

- Optimize performance and responsiveness

Deliverables

- Well-designed and implemented microservices architecture.

- APIs and user activity tracing integrated into applications

Micro-Service Application Tracking

aximsoft

"We understand how your applications and its underlying microservices are performing to identify and troubleshoot the root cause of performance issues and errors"

User Requests & Behavior Review

We review all your requests & behavior through your entire application

Application Performance Improvement

We identify your application performance bottlenecks and detect where high latencies are occurring and then to specific services impacting application performance.

Application Issues Discovery

We analyze how your application is performing and discover root causes to pinpoint where in your application and what is causing performance issues

Microsoft

User Activity & API Usage Tracking

aximsoft

"Governance, Compliance, Operational Auditing, and Risk Auditing of your cloud services"

Compliance Simplified

Aximsoft simplifies compliance audits by providing you recorded & stored event logs

Discover & Troubleshoot Security

We analyze and troubleshoot security and operational issues by capturing a comprehensive history of changes that occurred in your cloud account within a specified period of time

User & Resource Activity Identification

We analyze your API calls to identify which users and accounts called, the source IP address from which the calls were made, and when the calls occurred.

Workflow Creation & Automated Security

We define workflows that execute when events that can result in security vulnerabilities are detected
