Digital Transformations and Strategies

We believe that your journey to success is about much more than just technology and software, it is about transforming your culture, business values, and being able to provide a better, more complete experience for your customers.

Consulting

Our core focus is to provide professional consulting that delivers great value and helps your business achieve success. Our priority is to understand your business processes and corporate values and then to leverage our industry knowledge and best practices expertise to work with you and develop the best strategies and action plans that work specifically for your business.

Our professional consultants are experts at understanding many software and technology tools that can deliver the business process solution and success that you expect. We support you with the technology tools we offer, and we help you work with and manage other specialists that may be needed as part of providing the best possible solution to support your business objectives.

Business System Tools

To support the work we do with you, we use a range of proven technology tools. We have chosen to leverage Microsoft and the Dynamics 365 suite of products based on the integration, efficiency, and cutting-edge automation that they offer:

- Microsoft Dynamics 365
  - o Business Central for small and medium businesses
  - o Finance & Operations for Enterprises
  - o Customer Engagement for CRM
  - o Talent for HR
  - o Retail for B2C customers
- Power BI for analytics, dashboards, and insights into your business data
- PowerApps / Flow for specific custom requirements
- Office 365 to bring all the components together into a single solution

Software Development

As part of many Digital Transformation and business improvement initiatives there are requirements to deliver business specific functionality, modify standard business rules, make legacy systems communicate with new systems or create completely custom solutions. Our team of developers, with all the required technical skills, work closely with your team and our consultants to ensure your entire solution works the way you need it to.

IT Services

If you want one IT provider that understands all your business needs from beginning to end, we can work with you to ensure that everything is working as one comprehensive solution, or if you prefer we can just take care of it for you.

Industries:

- Aerospace & Defense
- Manufacturing
  - o Food & Beverage
  - o Equipment
  - o Electronics
  - o Consumer Goods
- Distribution / Wholesale
- Job Shops
- Metal Fabrication
